GOLD CUP'S WINNER REMAINS UNKNOWN

MAIL MAN IS STILL BRINGING BIG BAGS OF VOTES

Pat Barnes of WHT Makes Sensational Gain—Competitors Close Behind—Finish Next Issue

As this issue of Radio Digest goes to press, the fate of the 1926 Gold Cup to be awarded by this publication to the world's most popular Radio announcer, remains still a conjecture.

All ballots mailed on or before midnight of Saturday, September 4, are being received and counted in the final tabulation. As a result it will probably be several weeks after that date, or just about the time this number passes into the reader's hands, before the winner can safely be declared.

Everyone, of course, is anxiously interested in knowing what the final vote is showing. However, every mail changes the aspect, and at this time but few things can be said.

Pat Barnes Makes Great Jump

One of the somewhat expected surprises has been the great number of complete sets of votes sent in for Patrick Henry Barnes, announcer at WHT, Chicago. Many of Mr. Barnes' friends have been working from morning to night to win the contest for him. It would not be ethical to say what his gain so far is, but it is very large, and places him in the lead at this moment.

How many final counters will be marked up for his close competitors, G. C. Arnoux of KTHS, Earl E. May of KMA, Chester Gaylord of WTAG, and Norman Brokenshire of WJZ, is still unknown. Several of the above are very close to Barnes as this goes to press, and the end cannot be predicted.

Finish to Be Told Next Issue

In Canada Lillian Shaw of CKY is still leading.

What will be the outcome? Who will win the gold and silver cups for first and second places in the main competition, and what Canadian announcer will take home the special silver cup offered for Canada's most popular voice?

Read full and complete details of the finish and winners in the next issue of Radio Digest, dated October 1, and on the newsstands September 30.

Kolster Radio Compass Will Be Rene Fonck's Gas Savior

NEW YORK.—Because unfavorable weather delayed testing the Sikorsky bi-plane in which Capt. Rene Fonck was scheduled to attempt to fly from New York to Paris, the date of the hop-off was advanced to September 10, instead of September 1, as was at first planned.

Whenever the weather conditions are favorable after that date (which may have happened before this reaches the reader), the French flying ace will be ready to take to the air.

"I am depending upon the Kolster Radio compass to keep us on our course during the periods of low visibility we are bound to encounter," said Capt. Jack Irwin, who probably will be the Radio operator on the trip. "We have only about 500 miles of leeway on our course because of fuel limitations, so the Radio compasses will be of major importance during the 35 hours we expect to be in the air."

Lady Astor Makes Only One Speech, But Broadcasts It

NEW YORK.—Viscountess Astor, the leading British stateswoman and member of parliament, who is now on a brief visit to America, made only one public speech and its distribution to the public was handled by Stations WJZ, WRC and WGY.

The sole speech of Lady Astor in America was made before the dinner tendered in her honor by the National and the New York State League of Women Voters at the Hotel Waldorf Astoria.

HARRIET LEE, COVER LADY, REGAL QUEEN

IF EVER a queen were to the manner born then such a queen would be Miss Harriet Lee, the regal lady who adorns Radio Digest cover this issue. The WOK studio staff members at the Chicago Beach hotel, Chicago, almost curtsy and bow in her stately presence simply because it just naturally seems her due. However, Miss Lee is a very democratic queen and when she sings her Radio audience feels that she is singing a personal message to each and every listener. Her voice thrills with personality, and sympathy. Look at her again. Wouldn't you kneel and kiss her hand? No you wouldn't, old chap, not if her husband saw you try it. He claims that privilege exclusively for himself.

Sopranos Are All Right, Los Angeles Broadcasting Station Chiefs Declare

Naylor Rogers, of KNX, Champions Cause of Sopranos Who Can Sing and Decries Act of Charlie Garland of WBBM in Barring Ladies

By G. L. King

OTHER cities and other stations may bar sopranos from the microphone if they like, but not Los Angeles. A canvas of managers of Los Angeles and Hollywood stations revealed the fact that good Radio soprano voices are in demand, possibly because they are hard to find.

"We do not agree with Charlie Garland of WBBM and others that a soprano voice should not be allowed over the air," said Naylor Rogers, manager of KNX, one of southern California's most popular stations. "The trouble with sopranos and Radio is partly technical but not wholly. It is true that some broadcast stations transmit soprano voices badly and a great many receivers reproduce the higher notes very poorly."

Looks to Future Demand.

"But it is a fact," he continued, "that Radio receivers are improving rapidly and may soon approach reproduction as perfect as good transmission. We are looking to the future. Therefore, we put every good soprano we can find on our programs. It is true, of course, that we find more poor soprano voices than any other, but then almost every woman tries to sing soprano. If every male thought he was a Caruso, the percentage of good tenors would be about the same."

Mr. Rogers further stated that Los Angeles and Hollywood stations probably had more exceptionally good Radio so-

pranos at their disposal than any other city or section in the country. Some of them, such as Virginia Flohri of KFI and Elsa Zelinda Foley are known almost wholly for their Radio work, which has been accorded praise from California music critics, while others such as Raquel Nieto, coloratura soprano of the Mexican grand opera, and Margaret Messer-Morris, who is soloist with the Los Angeles Philharmonic and Symphonic orchestras, are known for concert work as well as Radio.

An Ideal Soprano

Raquel Nieto (picture on page 27), the Mexican coloratura, is the technician's delight. Although possessed with a voice of remarkable range on the higher register, the broadcast station operator is never worried about his "gain control" while she is on the air. Something unexplainable, some little crook in her throat or the roof of her mouth, make it possible for her to sing arias before a microphone that cannot be attempted by any other soprano.

"Summing it all up," concluded Mr. Rogers, "so long as the concert and operatic stages find a demand for soprano voices, why shouldn't we broadcast them? If there is trouble in transmitting or receiving the soprano voice then it is up to the technician to improve his apparatus, but so long as a broadcasting station is an entertainment factor we must use everything that anyone else uses—and more, too."

Looking Ahead

WPG, Making a Name for Itself with Its New Type 5,000-Watt Transmitter, will be described and featured in the next issue of Radio Digest, on the newsstands September 30. Long promised, the story of the "World's Play Ground" broadcaster is worth awaiting.

By the Time You Have Finished the Current Installment of "Goody Goody Girl" in this issue of Radio Digest you will be more than eager to see what happens to Lois when she reaches the Big City. This very modern tale is about the best thing Mr. Merlin Moore Taylor ever wrote. More adventures of Lois in the October 1 issue.

Like the Interview with the Radio Service Manager This Issue? It's on page nine and marks an effort to present the technical side of Radio in a very non-technical but interesting fashion. More on operating and trouble shooting is coming, and in an early issue, something distinct in set construction is promised.

Are Movie Actors Real People? Do They Get Nervous and falter before the mysterious and unresponsive microphone? How do they feel at their first experiences? Personal interviews with some of the most famous screen celebrities in Radio Digest soon.

Imagine Yourself Holding Your Sweetie's Hand while waiting for a certain song to come over the air from a little town in Missouri, knowing if you did hear it you were to propose and if you didn't hear it you were to wait until some other indefinite time. Read about it, for it is a true story in a forthcoming Radio Digest.

Special articles about broadcasting stations and artists, with photographs, and NON-RADIO fiction 5,000, 10,000 and 30,000 words in length are desired. No manuscripts accepted unless typewritten and prepaid, or returned without return postage being inclosed. All manuscripts are sent at owner's risk.

SHORT WAVES

By Marcella

Have promised a number of request "repeats" this time. Among them are Norman Brokenshire, Mac Ohman, Ford and Glenn, John T. Schilling and George Hay. Toot-toot, here goes the Short Waves Limited!

J. H. M. and R. O. D.: Norman Brokenshire rightfully keeps many maidens' hearts aflutter, for he is single and good looking. To think! Someone told J. H. M. that Norman was married and had nineteen children. I don't know where he has been hiding his score of family all these years from his good friends, Marcella. Born in Murchison, Ont., Canada, 28 years ago; migrated to Cambridge, Mass., in early youth; was once a draftsman at Pittsfield, Mass.; later wore a doughboy suit in the World War; honorably discharged and became a salesman in New York; answered an ad for a Radio announcer in the classified section of one of the New York newspapers one day, and finally was selected as the man for the position from a field of 500 applicants. After a long service at WJZ, he was transferred to WRC, Washington, for nearly a year, and then was recalled to WJZ when they opened up with superpower. He is slightly under six feet tall, weighs about 165 pounds, wears a cute little black mustache, and has romantic, curly dark brown hair. I will add that he is a type which I think would make good in motion pictures.

Ida: Mac Ohman is another one of those Scotchmen whom Radio and golf have made popular. Called the "sartorial treat" by one of his good announcer friends, Mac is a travelling balladist. In fact, he has been heard from practically every station in the Middle West. He has lived in Omaha, Nebr., nearly all the 26 years of his life because the city's name so nearly approaches his. Before Radio he sold insurance, but he has discontinued this now, so you may approach him with safety. Mac is very good looking, dresses perfectly, although inclined to yellow spats, stands 5 feet 7 inches up from the studio floor, and is full of effervescing youth and ambition. Rumor has recorded his marriage. "Maytime and You" and "Thinking" are two of his published compositions.

"New Reader": Yes, George Hay, the famous "Solemn Old Judge" of WSM, is married and has two children—both girls, I believe. His favorite sport is golf, and he devotes considerable time to writing. He has just sent me an autographed copy of his "Howdy, Judge," published by the McQuiddy Press of Nashville, Tenn. The book is intensely interesting, packed with laughs, and marks Mr. Hay as a born humorist and strong contender for the honors of Irwin Cobb. Of course, you all know he won the Radio Digest gold cup in 1924 as world's champion Radio announcer.

Nell: Yes, Ford and Glenn have recently recorded "Valencia" for Columbia. To repeat their history and descriptions, both are married, drive cars and each has a boy about 8 years old. Edgar Bill, WLS director, was responsible for pairing them into a team. When the two met through Mr. Bill they were surprised, for it turned out to be a reunion—Ford and Glenn having known one another some years prior in St. Louis. "Big" Ford Rush was born in New Orleans and his age is 32, weight 175 pounds, height 6 feet. "Little" Glenn Rowell was born in Pontiac, Ill., and his age is 28, weight 218 pounds, height 5 feet 8 inches, and likes pie and cake.

"Anxious": Sure, "Nubs" Allen is still appearing now and then at WLS. Looks? A pretty, petite brunette, with brown hair and a husband—unfortunately for you. She specializes in popular songs. The Lucas Sisters? No one knows anything about them.

And now, my friends, hold on to your hats and don't stand up 'til the car stops moving—for Eddie Squires is married! It happened last Friday, the thirteenth, to this formerly impregnable bachelor who probably has acted as announcer at more stations than there are at present licensed in the United States. Right now, of course, he is doing it at WJAX, Jacksonville, Fla., where the "globe-trotter" is less likely to depart burdened as he is with the responsibilities of a benedict. The girl was Miss Thyra Everett and her former home was White Springs, N. Y. "Eddie" gave his name at the license bureau as Edwin B. Squires, age 34, and residence, Connecticut. This last bit of information may be very valuable to the many fans who have failed to keep track of him during his wanderings microphone bound. In honor of the ceremony, Walter Tison, director announcer of WGHB, Clearwater, Fla., dedicated a special number to "Eddie" called "The Prisoner's Song." A Florida moonlight night, and a silent one for WJAX, are said to have made the romance "take."

(Continued on page 20)

FANS WILL HEAR DEMPSEY FIGHT

DAWES SPEAKER AT GREAT RADIO FEAST

OVER 200 PICKED ARTISTS FOR 33-STATION BILL

Wednesday, September 15, Date of Banquet and Festivities Officially Opening New Radio Season

NEW YORK.—Vice-President Charles G. Dawes will be the speaker at the Third Annual Radio Industries banquet on Wednesday evening, September 15, according to announcement by Herbert H. Frost, chairman of the speaker's committee for the banquet.

When the vice-president faces the thirty-three microphones on the speaker's table at the annual banquet in New York city, his voice will be carried to an audience of listeners that will undoubtedly be the largest ever reached by an official of the United States or any other individual. On the occasion of the inaugural of President Coolidge, a record number of twenty-seven broadcasting stations participated in the transmission of the program. When the vice-president begins his address the hook-up will have at least six more stations and perhaps others, as additions to the list of stations participating are continually being made.

Two Hundred Artists on Bill

Over two hundred artists, the pick of the land, will entertain at the banquet and hence over the chain of stations. Mary Lewis and Reinald Werrenrath are headliners on the program which will begin at 7 p. m., Eastern daylight saving time, which is 6 p. m. Eastern Standard

DISTANT ANNOUNCER GETS FAN IN WRONG

NEW YORK.—One of WEA's announcers put a gentleman in bad with one of his neighbors recently, The evening being hot and the front porch the place of refuge, the loud speaker was brought out to entertain the family. A lively banjo selection came over the air. A woman passing by stopped to listen. Soon came the name of the selection—"Keep Moving." With a voice ringing with scorn, she shouted, "Mind your own business," in the general direction of the front porch and strutted away haughtily from the front of the house.

KINDLY OLD LADIES ARE TRICKED AGAIN

LONDON.—Davy Burnaby and Melville Gideon, members of a famous London revue company, were broadcasting from 2LO recently, and at the close Davy said, "If any lady or gentleman would like to hear their favorite song, Mr. Gideon will sing it. You have only to speak the title into your loud speaker!" A moment later he said, "A lady has asked for 'Crinoline Gown.' Mr. Gideon will sing it." He did. And the next day Burnaby received four letters of thanks from old ladies who said they had asked for it!

ASSOCIATED PRESS DONATES FACILITIES

OVER 100 STATIONS WILL CARRY RUNNING STORY

Will Tell Blow-by-Blow Details of Champion's Meeting with Gene Tunney September 23

PHILADELPHIA.—When Jack Dempsey hands Gene Tunney the finish punch during the late afternoon of Thursday, September 23, at the Sesqui-centennial grounds here, or perhaps when Gene lands a left hook under Jack's chin for a knockout, the whole world of sporting Radio listeners will know of it less than a second after the actual happening.

Through the courtesy of The Associated Press, the world-renowned news gathering organization employed by thousands of newspapers, the story of the fight blow-by-blow will be broadcast by over one hundred broadcasting stations located from coast to coast and from Hudson's Bay to the Gulf of Mexico.

Chains Also to Handle

Associated Press newspapers owning broadcasting equipment and several score of stations which cooperate with Associated Press newspapers, will handle the fight. In addition, part of the WEA and WJZ chains, it is reported, will carry independent running stories of the momentous pugilistic encounter for the world's heavyweight championship.

The big fight will be on the air some-

CHARMING MICROPHONE BEAUTIES

Up and down the Pacific coast you won't find a more popular pair of singers than Gypsy and Marta, above, of San Francisco. If you like hoop skirts, you should see Leona Hogarth (at right) don them in "Black Velvet" at the Playhouse, Chicago. Her stage popularity was equalled by Radio when she appeared recently over WQJ and WHT. An artist of rare ability is Madame M. H. Goldschein, left, whose dramatic soprano voice has interpreted many arias from opera for the audience of WSM, Nashville.

time or Central daylight saving time, and 5 p. m. Central Standard time.

Paul Klugh, executive chairman of the National Association of Broadcasters and chairman of the banquet committee, will appear as toastmaster again this year as in the past two years, and Major J. Andrew White, pioneer Radio announcer, will act once more as master of ceremonies.

Major Herbert H. Frost Is Tendered Farewell Banquet

CHICAGO.—More than 400 members of the Radio industry, friends of Major Herbert H. Frost, ex-president of the Radio Manufacturers' association, gathered to do him honor at a farewell banquet recently given him at the Palmer house here prior to his departure for New York city where he will direct the sales policies of the E. T. Cunningham company.

Addresses were made by A. J. Carter, president of the Carter Radio company of Chicago; Col. A. T. Clifton, Harold J. Wrape, president of the Federated Radio Trade associations; Frank Watts of New York, and Curt Wessel.

Speaking for members of the Radio industry Mr. Carter presented a magnificent loving cup to Major Frost, while Col. Clifton in the name of the officers of the United States Signal Corps Reserve presented Major Frost with a handsome sabre. Paul B. Klugh, executive chairman of the National Association of Broadcasters, acted as toastmaster.

New Studio for WJAG, Norfolk

NORFOLK, Neb.—Plans for an elaborate new studio are included in the construction of a new \$500,000 hotel at Norfolk. Concert programs will be broadcast by remote control from WJAG, The Norfolk Daily News station.

WGBF APPARATUS ROLE PLAYS HERO

Amplifiers Pick up Signs of Life When Six Miners Are Entombed

SALEM, Ky.—Few broadcast listeners know that when five miners were entombed for six days recently in the Hudson mine near here, Station WGBF, of Evansville, Ind., played an important part in their rescue.

Almost when hope for their lives had been despaired, amplifying equipment and microphones were rushed by airplane from the Finke Furniture company broadcaster at Evansville. Carl Waddell placed the microphones in the mine shaft near the cave-in where the trapped men were believed to be, and Operator Martell Montgomery of WGBF adjusted his instruments and listened.

Distinct tappings and the ring of a miner's pick were heard. The Radio amplifier, multiplying the sounds 10,000 times, heard what the ears of men unaided could not. Rescue efforts were doubled, and the next day the five men were saved, little worse for their six days of imprisonment.

Does Radio Have Its "Dead" Night? WOK Would Know

CHICAGO.—In an effort to ascertain if Radio has its "dead night" each week like the theater, fans who tune Station WOK are being asked by Announcer George W. Allen to write to the studio telling which nights of the week they devote to Radio and what night, if any, they do not care for it.

Mysterious Automaton Answers Fans' Queries

Crosley Booth Attracts Many at New York Show

NEW YORK.—If there is still any mystery left in Radio, it will be found in the marvelous automaton on display at the Crosley booth in the third annual Radio World's Fair now being held in Madison Square garden, New York city. This mechanical figure, six feet tall, with the body of a man and the head made of a grotesquely-painted Musicon loud speaker, is attracting the attention of the scientific world and Radio listeners through its mysterious answering of questions which show visitors compound.

The giant figure, which might well be called the "answer man," was developed in the Crosley engineering laboratories in Cincinnati for the special amusement of exposition visitors. Its mechanical construction is so arranged that people can whisper near the figure and immediately they hear a mysterious voice talking to them or answering their queries.

Youngstown, O., Plans for First Radio Show Sept. 30

YOUNGSTOWN, Ohio.—The first annual Radio show ever held in this city will be put on in the magnificent new Fitch garage here September 30 and October 1 and 2. Thirty of the leading Radio dealers of the city have signed for space and the show has the endorsement of the Mahoning Valley Amateur Radio association and the Youngstown Radio Dealers' association. Arrangements have been made to have a temporary station erected to broadcast musical programs during the show.

time around 4 p. m. Eastern daylight saving time, which is 3 p. m. Eastern standard or Central daylight saving time, 2 p. m. Central standard time, 1 p. m. Mountain standard time, and noon Pacific time.

CALL FOR BLOOD GETS IT AND SAVES WOMAN

WRVA, Richmond, Broadcast Wins Fifty Volunteers

RICHMOND, Va.—Elmer G. Hoelzle, studio director at Station WRVA, Richmond, Va., sent out a call for blood and got it, thereby rendering a service in life saving probably never attempted before in broadcasting.

A few days ago a woman patient in the Johnston-Wills hospital, Richmond, reached a crisis from pernicious anaemia, and death stalked in the shadows. Dr. W. R. Graham called upon WRVA, which was in the midst of its evening program, to broadcast for volunteers for a blood transfusion. Fifty persons immediately responded. Tests were made for the precise No. 2 quality of blood required and Manley Betts, one of the WRVA artists, was selected for the operation.

The transfusion proved a success and the life of the woman patient was saved.

KWKH Becomes KSBA

SHREVEPORT, La.—W. K. Henderson, millionaire sponsor of Station KWKH here, has sold his interest in the enterprise to W. G. Patterson who has been associated with broadcasting since 1921 and who originally was sole owner of the station. Mr. Patterson will head the new Shreveport Broadcasting association, which will operate the station, and the call will hereafter be KSBA.

Two Great Receivers

that cover the full range of
radio broadcasting

from

10 to 200 meters

THE Grebe CR-18 is an exceptional receiver for high radio frequency reception. It employs a coupled regenerative circuit adapted for a frequency range of from 1500 to 30,000 kilocycles (10 to 200 meters) and is especially designed to meet all amateur requirements and radio frequency assignments of the U.S. Department of Commerce. There are seven outstanding features that make the CR-18 especially efficient.

Write for charts and folder describing these features.

CR-18

Front view of CR-18 with 200 meter coil intake and additional coils for 10, 20, 40 and 80 meter bands.

This Company owns and operates stations WAHG and WBOQ. Also low-wave rebroadcasting stations, Mobile WGMU and Marine WRMU, and stations 2ZV and 2XE.

from

150 to 550 meters

THE extreme efficiency of the Synchronphase is due to several exclusive Grebe developments, especially the *Binocular Coils* which provide exceptional selective sensitivity; *Colortone* which gives control over tone quality; *S-L-F Condensers* which make accurate tuning easy; and *Low-Wave Extension Circuits* which give a tuning range of from 550 down to 150 meters, covering over 100 stations not reached by other sets.

Write for Booklet RD. Then ask your dealer to demonstrate.

THE
GREBE

Air Confetti at KYW Carnival

MERRY ENTERTAINERS

Carry Glee and City Night Life to Listeners Scattered Through Country and Small Towns. Gaelic Twin Ticklers Propound Coconut Problem and Add Adipose Tissue.

By MARSHAL Z. TAYLOR

On the air (mail)—Listener's (P.O.) Station USM, Green Bay, Wis.

JUST what good are coconuts? You should have heard my mother, nigh onto 70 years old and 330 pounds weight, as you sang it. Think over the words of the song and then you will know why she is laughing yet. Thanks for the program. From Grandma McHugh and myself.

YOU have been listening, ladies and gentlemen, to Mr. David McHugh, applausecasting from his home at 901 E. Walnut St., Green Bay, Wis., in appreciation—What's that? No! No, dear friends, not "applesaucecasting," I said "a-p-p-l-a-u-s-e-c-a-s-t-i-n-g," — sure, that's it, sending his little message of appreciation to the KYW Congress Hotel Carnival, Chicago.

Fannie and Eddie Cavanaugh, the "Gaelic Twins," (left) and Fannie in the picture above.

And he is just one of ten thousand or more other constant listeners who announce by card and letter their enjoyment of this frolicsome program that filters through the Great Lakes Region every Tuesday and Thursday during the pre-midnight hour.

If you have not already dialed in this Big Show it's right this way to the Main Tent!

Listen! Get that 535.4 wave! Hear the dancing, singing Cavanaugh's! Fannie and Eddie, the celebrated Gaelic Twins and their funny Coconut song! Hear Art Linick, the jovial announcer! Hear dainty Grace Wilson, the girl with the melting, tenor voice! Hear the great Z. Earl Meeker, the wonder baritone of the opera!

And the price of admission, ladies and gentlemen, is just a turn of the wrist to 535.4 meters. Right this way!

The carnival at KYW serves as the champagne for the evening's Radio banquet. From the first

popping of corks at 10:30 the ether sparkles with snappy singing, playing and interchange of chit-chat between announcer and entertainers. It's a dizzy whirl with lively guests bobbing in and out and contributing to aerial confetti and general merriment. The listener has no trouble imagining himself or herself a member of the jolly party. It is all so "Artfully informal."

"Two days is not enough for our carnival," declared Mr. E. E. Mattson, who relays to the press vital statistics and other important matters appertaining to the Radio activities of the Westinghouse station. "This carnival is doing more to build up the nation than all the delicatessen stores in the country. No wonder the lady weighs over 300 pounds and is laughing yet. Look at me. I'm still a little over 200 and I refrain from eating entirely on Tuesdays and Thursdays. I did weigh over 250, but by cutting out potatoes when I eat meat and meat when I eat potatoes and laying off eats altogether carnival nights I have managed to cut it down. But I wouldn't miss the carnival if I have to laugh myself to a ton.

"And it's getting better all the time—better and better every day—poor Coue! You know the Cavanaugh's, the Gaelic Twin Ticklers. They sing that breeze about the questionable utility of coconuts in general. They have some other good ones about the 'Little German Band,' 'Under the Summer Sausage Tree,' 'Hinky Dinky Parlay Voo,' 'Nice People' and 'Baloney.'

"Eddie and Fannie are old-timers as entertainers. They were headliners in vaudeville when we booked them for the second program KYW ever put on the air and you will remember that we were the first of the thirty-five Chicago broadcasters. Eddie was in the war, a doughboy. He carried on with his nonsense Over There, making the boys hold their sides from laughing when they all knew that the next minute they might be holding their hides together from German bullet holes.

"When Charlie Erbstein com- (Continued on page 38)

Grace Wilson, the girl with the tenor voice (lower left). Art Linick, the Dutch announcer of the KYW Carnival (below). Z. Earl Meeker, opera baritone from Pacific Coast, who helps KYW program.

The New Balkite Charger

MODEL J. Has two charging rates. A low trickle charge rate and a high rate for rapid charging. Can thus be used either as a trickle or as a high rate charger. Noiseless. Large water capacity. Rates: with 6-volt battery, 2.5 and .5 amperes; with 4-volt battery, .8 and .2 amperes. Special model for 25-40 cycles. Price \$19.50. West of Rockies \$20.

Balkite Trickle Charger

MODEL K. With 6-volt "A" batteries can be left on continuous or trickle charge thus automatically keeping the battery at full power. With 4-volt batteries can be used as an intermittent charger. Or as a trickle charger if a resistance is added. Charging rate about .5 amperes. Over 200,000 in use. Price \$10. West of Rockies \$10.50.

A New Balkite "B" at \$27.50

Balkite "B" eliminates "B" batteries and supplies "B" current from the light socket. Noiseless. Permanent. Employs no tubes and requires no replacements. Three new models. Balkite "B"-W at \$27.50 for sets of 5 tubes or less requiring 67 to 90 volts. Balkite "B"-X for sets of 8 tubes or less; capacity 30 milliamperes at 135 volts—\$42. Balkite "B"-Y, for any radio set; capacity 40 milliamperes at 150 volts—\$69.

Balkite Combination

When connected to your "A" battery supplies automatic power to both "A" and "B" circuits. Controlled by the filament switch on your set. Entirely automatic in operation. Can be put either near the set or in a remote location. Will serve any set now using either 4 or 6-volt "A" batteries and requiring not more than 30 milliamperes at 135 volts of "B" current—practically all sets of up to 8 tubes. Price \$59.50.

All Balkite Radio Power Units operate from 110-120 volt AC current with models for both 60 and 50 cycles. Prices are higher in Canada.

Announcing the new Balkite Light Socket Radio Power Units

A new Balkite Charger with both trickle and high charging rates. Three new Balkite "B's" including the new popular priced Balkite "B"-W at \$27.50. The new Balkite Combination—with the "A" battery it furnishes automatic power to both circuits.

Now you can operate your radio set from the light socket. Merely by adding the new Balkite Radio Power Units—either by adding a Balkite Charger and Balkite "B," or by adding the new Balkite Combination Radio Power Unit.

In either case the result is the same—light socket operation, maximum convenience, and smooth silent power.

Balkite Light Socket Power is noiseless. There is no hum. It is never low and never runs down, but is always exactly what is required by the set. It is permanent. Balkite Radio Power Units are permanent pieces of equipment. They employ no bulbs, and have nothing to replace or renew. They cannot deteriorate from either use or disuse. Other than a negligible amount of household current their first cost is the last. With sets of high current requirements their use is highly desirable for the saving alone. They require no changes in your set.

Over 600,000 radio receivers—one of every ten—are already Balkite equipped. Equip yours with Balkite and convert it into a light socket receiver. Know the pleasure of owning a set always ready to operate at full power.

GOODY GOODY GIRL

"Hush!" She rose to her feet alarmed by his vehemence. "I won't hush!" He, too, got up and she backed away when he made as if to take her into his arms. "I love you. . . ."

REBELLION surged through the soul of Lois Sylvester when she opened the door to little, old Miss Wexby and her bowl of goldfish.

"I'm sorry, Miss Wexby," she said, "but I'm afraid I won't be able to take care of your goldfish this time. I'm going away."

"You goin' away? Where you goin'?" "That's none of your affair. I'll not keep you waiting. Good-bye." She shut the door in the face of the self-important old lady who had for years been accustomed to leave her goldfish at the Sylvester home while going away for visits.

Lois shuddered. She was not going away. What could she tell her hard-shelled Yankee step-father? He would not condone the lie, she knew that. But she would have to tell him. It would mean a crisis. She would ask his permission to let her visit a school girl friend at Kaneville to make her story to Miss Wexby good.

Then Phineas Blair, stern and uncompromising, came in from the fields. Lois told him what had occurred.

"But I won't permit you to go. That would be helping you to tell a lie. You will have to go to Miss Wexby and apologize, although I'll admit I don't care any more for her than you do."

LOIS Scarcely Had Trudged from Sight of the Old Homestead When Adventure No. 1 Overtook Her

His decision was final. He allowed of no argument in his household. He put on his coat and departed for the hardware store for parts to his cultivator, the errand that had brought him home almost in time to be a witness to the incident that had so much to do with Lois' great decision.

But the girl felt a brimming consciousness of her newly arrived eighteen years and the surge of rebellion grew stronger and stronger.

Blair retired early and slept soundly. Lois packed her suitcase and stole quietly out the door, half-afraid and

yet eager to demonstrate the independence of her proud Southern ancestry.

CHAPTER II

Escape

ITS SETTLERS in the early days of the republic had named Lois Sylvester's home town Paradise. An absurd name it seemed more than a century later and one that brought chuckles from the city folks who passed through and derisively referred to it as a cross-roads village.

Paradise really was just that. It still boasted only a few hundreds of population. There was no railroad or anything like paved streets, electric lights, waterworks and so on which railroads bring in their wake. Those had gone to Clermont, the county seat, five miles away.

Modernity had touched Paradise but lightly. It was on a branch telephone wire out of Clermont. It had a tiny movie house where twice a week films were shown near the close of their careers. A handful of automobiles, flivvers for the most part, were to be seen on its streets and there were at least a dozen Radio sets in its homes.

Paradise, like scores of similar little communities throughout the country, continued to exist because it lay in a rich farming community and the farmers—they clung largely to the colonial name of planter themselves—found it convenient to do their ordinary trading there in preference to spending the time on the road to and from Clermont.

Lois' great-grandfather had been one of those original settlers of Paradise. The village touched the edge of his plantation, for the Sylvesters were well-to-do in those days and owned many broad acres and the slaves to work

(Continued on page 13)

CROSLLEY RADIO INSTRUMENTS Each item the utmost in radio at its price. All prices slightly higher west of the Rocky Mts.

THE "PUP" \$9. This little double-circuit one-tube set has brought happiness to thousands and made records for long distance receiving.

THE "4-29" \$29. A 4-tube receiver of amazing efficiency. Crescendon equipped! Everywhere considered marvelous at its price.

"THE PORTABLE" \$33. The 4-29 in portable form handy, compact, efficient.

THE "5-38" \$38. A five-tube tuned radio frequency set, with two stages of non-oscillating radio frequency amplification. Crescendon control, two stages of audio frequency amplification.

THE "5-50" \$50. 5-tube, single drum station selector, accumulators, Crescendon, power tube adaptability, all-metal shielded chassis.

"RFL-75" \$65. 5-tubes. True-cascade amplification; non-oscillating, non-radiating even under any mis-handling. Its perfect balancing achieved by Wheatstone bridge in each stage of amplification. Exceptional selectivity and tone.

THE "5-75" CONSOLE \$75. Beautiful solid mahogany console finished in two tones. Embodies the 5-tube \$50 instrument with single dial control. Crosley Musicone speaker and ample compartment for batteries. Stands 41 inches high.

"RFL-90" CONSOLE \$90. Introducing the double drum station selector! Includes Musicone in exquisite console. Room for batteries and all accessories. 41 inches high, 30 1/2 inches wide.

"MUSICONES" \$12.50, \$14.75, \$23.50. Regular 12-inch size, \$12.50. Super Musicone, with still finer volume and tone, \$14.75. Musicone, Deluxe in mahogany "clockcase", \$23.50.

THE "MUSICONSOLE" \$32. Embodies the Musicone in a beautiful console of two-tone mahogany finish and provides room for batteries and accessories. 24 1/2 inches long inside.

One-dial control. You find your station, then write its letters on the graphic dial, locating it once and for all, to turn to whenever your fancy dictates.

The new Crosley all-metal shielded chassis not only aids in producing astounding selectivity, but standardizes manufacture and helps make possible the price of \$50.

\$50

Slightly higher west of the Rockies. Never before, at anywhere near this price, has a radio set possessed all these advantages: 1. Single-dial control with graphic station selector. 2. Metal-shielded chassis, contributing to amazing selectivity and reducing cost. 3. Crescendon control, producing exquisite volume from distant stations. 4. Crosley Acuminators, which sharpen tuning and increase selectivity. 5. Power tube adaptability. 6. Beautiful, solid mahogany cabinet of distinguished design and exquisite two-tone finish.

One-Dial Control!

... in this amazing 5-tube set at \$50

Already the new 5-tube Crosley set, at \$50, has met such a tremendous demand as to confirm the prediction that it will replace thousands upon thousands of sets now in use.

Confronted by high prices, many people who desired to replace their old sets have hitherto hesitated to do so. Now ... in the new Crosley "50" ... they find the features and qualities they desire, formerly exclusive to very high-priced sets ... available at small investment.

The incomparable joys of Single-Dial Control! Uncanny selectivity, resulting from its metal-shielded chassis and the surpassing efficiency of the Crosley circuit's advanced design! Exquisite volume, thanks to the matchless Crescendon! Crosley Acuminators, power tube adaptability ... all the attributes of radio at its best ... for \$50!

In all the Crosley line no instrument represents a greater triumph than this wonderful 5-tube set. Examine the line in full, as illustrated in the marginal column at the left ... each item a victory for mass production in reducing radio prices. Then see the Crosley line at Crosley dealers ... including the new "50" ... now on display!

See it...hear it. View the refreshing beauty of its solid mahogany cabinet. Operate it yourself. Watch the stations, written in on the graphic dial, parade before you and usher in their programs with unerring accuracy. Sharpen the selection with the Crosley Acuminators. Release inspiring volume by means of the Crescendon.

Know what heights ... in tone, volume, selectivity and sensitivity ... radio of moderate price has reached!

THE CROSLLEY RADIO CORPORATION, CINCINNATI—POWEL CROSLLEY, Jr.,

Crosley manufactures radio receiving sets, which are licensed under Armstrong U.S. Patent No. 1,113,149 or under patent applications of Radio Frequency Laboratories, Inc., and other patents issued and pending. Owning and operating station WLW, first remote control super-power station in America. All prices without accessories.

President For Catalogue write Dept. 49

OUTSTANDING FEATURES OF CROSLLEY RADIO DEVELOPED BY POWEL CROSLLEY, Jr.

THE "CRESCENDON" When, on ordinary radios, ears must strain to catch a station miles away, a turn of the Crescendon on Crosley radios instantly swells reception to room-filling volume. An exclusive Crosley feature.

ALL-METAL SHIELDED CHASSIS This truly great radio achievement, found in several Crosley sets, furnishes a substantial frame for mounting elements, produces excellent alignment of condensers, shields the units from each other, prevents inter-stage, improves the stability of the circuit, increases selectivity and saves costs by standardizing this phase of manufacture.

THE SINGLE-DIAL STATION SELECTOR Nothing in radio equals the joy or the convenience of single dial control. Crosley single drum control enables you to find the stations sought without log book or "tuning."

THE "ACUMINATORS" Crosley Acuminators provide sharp tuning where reception spreads broadly over dial, easily tune out local and bring in far stations. Ordinarily, once adjusted and they need not be touched again.

USE OF POWER TUBE Power tube adaptability marks the Crosley "5-50", "5-75" and "RFL" sets. This feature typifies Crosley provision for best radio reception at moderate cost.

QUALITY AND BEAUTY IN CABINETS AND CONSOLES

“My Radio Set Don't Work”

THERE Are Three Classes of Listeners, According to the Chief Service Man of a Large Radio Store. Sixty Per Cent Are “Bad”. If You Are in This Group, Read Below and Repent Your Sins. Anyway, Here's a Lot of Common Sense Free of Charge.

By EVANS E. PLUMMER

DING-a-ling-a-ling! The telephone bell in the Radio service department of a large Radio dealer rang. The tired manager answered. The caller's first question was characteristic.

“Do you know anything about Radio?” was the needless interrogation of the fan in the desire of service. After being assured that he did, the manager was greeted with this:

“Well, why couldn't I hear any long distance stations last night?”

The service manager was accustomed to this. He had the patience of Jove. He explained that last night was a “bad” Radio night. Weather and atmospheric conditions were far from satisfactory for reception. Was this the first night the fan's set had shown symptoms of falling down? Try it again and see how it works. Whereupon the fan replied:

“That may be true, but I don't think you know what you are talking about.” Crash went the fan's receiver.

Radio Receiver Is No Miracle

Unbelieving readers, this is just how you act, or I should say the majority of you act. The article which you are reading is based upon an interview with the Radio service manager of a store employing from eight service men in the summer to sixteen men in the winter. His troubles are many. The majority of listeners, he has observed, believe that Radio is such a miracle that their receivers must go on performing miracles night after night without ever receiving the least bit of attention. Or, when there is a bad Radio night, as explained above, most listeners do not know that weather and atmospheric conditions play an important part in their success at receiving distant stations, and even hearing local broadcast programs without static or the crackles and noises of nature's electricity in the air.

You don't expect it of your automobile, do you? You never look forward to hearing the engine run when your gasoline tank is empty. You know the consequences of driving without having sufficient oil. Ten thousand miles and the average tire is ready for replacement.

Give the Set Some Attention

But—Radio is a “miracle,” and because it seems mysterious to you, the excellent directions of the dealer who sold you your installation are disregarded until it is too late.

Write this in your hat, or better, paste it under the lid of the receiver:

“RADIO IS NOT A MIRACLE. A RADIO RECEIVER REQUIRES JUST A LITTLE BIT OF ATTENTION NOW AND THEN.”

I am asking you to believe this. I am further asking you to believe in the service men. Don't think that your scattered Radio knowledge is superior to his. He is just a human being trying to make your receiver do the best it can.

The service manager told me many interesting things. One was the chief reasons for trouble calls. He ranked them in the following order:

When Trouble Calls Come In

1. Failure to get distant stations, or fading of stations. “Fading” is not the fault of a receiver. It is caused through some phenomena of nature and happens in the intervening space between the station and your receiver. Probably all the receivers in town will be troubled by the fading of the same particular station at the same time. This should prove to you that fading is a general Radio “disease,” a cure for which has not yet been discovered, and for which you cannot justly blame your receiver.

2. Battery or tube troubles. These will be discussed later.

3. Loose connections to the set or power supply.

4. Poor aerial or ground.

5. Trouble inside the set other than that caused by defective tubes. Note that the service manager finds but few calls which may be classified under this heading.

There they are—all five of them generalized. Of course, there is one other,

We Are Like That!

WHEN a middle-aged gentleman of rather pugnacious temperament tongue-lashed the service manager of a large Radio store, he finally sent one of his best trouble shooters to the man's house. Evidently the set did not require much work, for the repair man was back in a hurry. “What was the trouble?” the service manager inquired.

“Hah! That's the best one yet,” the trouble shooter replied. “It cost me one minute's work and the old duffer just \$1.50 because he forgot to turn on the battery switch.”

You would be surprised to know the number of foolish calls for service made upon the average Radio dealer. The article herewith describes some of the most frequent troubles of average broadcast listeners. The majority of legitimate troubles are caused by run-down batteries or defective tubes. Read this and save yourself and others “grief.”

and although it is not classified, we shall describe it here as “dumb foolishness.” In this category falls the man who called the service manager and for thirty minutes outgessed all questions of diagnosis, until finally the service manager asked him, “Did you plug in your loud speaker?”

“By golly, I forgot all about that,” came the fan's embarrassed reply.

That is not far fetched. Listen to this.

“One of the best ones, though,” said the service manager, “was on a middle-aged gentleman of rather pugnacious temperament, who tongue-lashed me to a fare-you-well. I finally sent my best man out to his house. Evidently the set did not require much work for he was back in a hurry.

“What was the trouble?” I asked him.

“Hah! That's the best yet. It cost me one minute's work and the old duffer just \$1.50 because he forgot to turn on the battery switch.”

“Who cause the most trouble calls, men or women?” I asked. The service manager thought a minute.

Men Cause the Most Trouble

“Women call more often than men, probably because their husbands ask them to take care of this detail. But I think men cause the most trouble by meddling with parts of their sets they know little or nothing about. Most men, I have found, overestimate their technical knowledge.

“On the other hand, we have customers who admit knowing nothing about Radio receiver maintenance and do not want to know anything more. In this class are found wealthy persons who hire chauffeurs to drive and keep up their cars. These people want their sets kept in the pink of condition at all times and are perfectly willing to pay our service charge of \$1.50 every two or three weeks just to have the service man inspect their receivers and keep them in good condition.”

What Most Common Troubles Are

“What are the most common troubles your men find when they make an inspection on the average service call,” I asked. The manager's answer was a gem. Every set owner should read it carefully and impress upon his mind the valuable knowledge which it contains.

“Most troubles come from the listeners who never bother to charge their storage A or perhaps B batteries, or both. As a general rule, batteries cause the most grief. People think dry A, B and C batteries last forever. Some of them

have an idea storage batteries contain an infinite supply of electricity.

“Dry A batteries last only from three to six weeks when coupled to a super-heterodyne. Then they must be replaced.

“Dry B batteries have a longer life. It may run from three to six months—sometimes, but not often, longer. When a 45-volt block of dry B battery registers less than 34 volts on a fairly accurate voltmeter, the block should be replaced. Further use often causes noisy reception, and the tuning in of long distance stations is practically impossible. Voltmeters that are too cheap should not be purchased. They will not register accurately, and more than likely they will be of a ‘low resistance’ type which will drain the valuable life from the B block.

Tap Water Not Distilled Water

“Wet or storage A batteries should be charged whenever a hydrometer reading shows lower than 1200. The charging can be stopped when minute bubbles, like pinheads, are observed through the filler holes at the top of the solution. Or, if the hydrometer reading rises to 1250 or 1300, one may assume that the battery is fully charged. A charged six volt storage battery should read 6.6 volts or more on a 0 to 10 or 0 to 15 scale voltmeter.

“Distilled water should be added to the cells through the filler holes whenever the plates begin to show above the surface of the solution. The plates should always be just covered. We find that many people never look into their batteries, or if they do think to add water once a month, they add drinking water, thinking it will do. It will NOT!

Ever Clean Your Batteries?

“What has been said for storage A batteries applies also to storage B blocks. Many people forget that either a different charger or different connections on the same charger are required for A and B storage cells. Much noise in reception is traced to dirty tops on storage A or B batteries. These should be cleaned off periodically with a damp rag, which should be thrown away after use.

“Dead C batteries cause some but not much trouble. The average life of a dry C battery is six months. Then they should be tested.

“Very little trouble is found in either A, B, or trickle chargers, or B eliminators. Many people are mystified by the trickle charger and forget to add distilled water to their storage battery. They for-

get that the water evaporates just as rapidly from a storage A battery equipped with a trickle charger as from an unequipped storage A.”

The service manager paused for breath. I asked him about tube troubles. He replied:

Common Troubles of Tubes

“The chief troubles reported on tubes are first, burn outs, second, low filament emission, and third, shorted elements inside the tube—a fault usually caused by an inquisitive man or child handling or shaking the tube. Burn outs are unavoidable. Filaments may last a thousand hours, and again they may not. Much depends on the careful treatment which the listener accords his tubes.

“Low filament emission is a common fault with 199 and 299 type tubes. This is usually caused by the listener ‘forcing’ his tubes, or in definite terms, applying more than three volts to their filaments. That is why we recommend the use of a voltmeter on receivers equipped with 199 tubes. Low emission is also caused by tubes becoming worn out. The 199 or 299 type tube six months old will often have this trouble. In either case, the process known as ‘rejuvenation’ often returns the tube to usefulness. Rejuvenation should not be practiced too frequently. Twice in the life of a tube is about all that will do any good. After that it harms, if anything.”

The “Champion” Rejuvenator

Right here, I interpolate the service manager's discussion with a note. One of my friends is an enthusiastic listener. He owns a super-heterodyne using 199 tubes. To make sure his tubes would always be “up to snuff” he purchased a rejuvenator and rejuvenated his tubes every night for a week. By that time his set was beginning to do worse instead of better. He asked me what to do. I told him to store his rejuvenator where he could not get at it more often than once every three to six months, and then purchase a new set of tubes. The service manager continued:

“Very little filament emission trouble is reported on 201A, 301A or power tubes. Burn outs or rough handling usually end their careers.”

Aerial and Ground Weak Spots

“What aerial or ground troubles and repairs within the sets themselves do you find most often?” I asked.

“Aerials are often too long, making the set tune broadly. In this case we shorten them to fifty feet or less. Then again they may be very dirty, their insulators dirty or cracked, or on flat buildings we many times find aerials crossing one another and making contact at the crossing. Sometimes they are loose and sagging. We tighten them.

“The all-important ground connection is sadly neglected in nearly every case where the fan makes the installation himself. Listeners should realize that a perfect ground connection means the difference between good selective reception, the hearing of distant stations, and not having either.

“Loop aerial connections are sometimes broken, short-circuited or loose. One man thought because his loop was inserted in a socket which revolved, that he should oil it. He did. When we called we cleaned out the oil and the set worked once more.

Set Itself Gives Least Trouble

“The set itself gives the least trouble of all, if you do not count tube trouble as set trouble, which you should not. Now and then we trace the trouble to a ‘resin’ joint in the set's wiring, or to wiring that has broken at some point through shipment or rough handling. A touch of solder and this is overcome. Often so-called set troubles are found merely to be loose connections at the binding posts of the set. The listener always feels foolish when he pays \$1.50 to learn this simple thing.

“We always give two months of free service to everyone buying a receiver through our store. When that period is over we charge a fee of \$1.50 for each

(Continued on page 33)

Season's New Models Please

WITH the Radio shows and expositions of the fall comes a most pretentious array of 1927 model receivers and accessories. On this and the facing page are described some of the outstanding designs which have been prepared to attract the broadcast listener's attention. No doubt, many persons will replace their receivers this year with sets containing advantages to be had in this season's designs. Principal improvements observed this fall are simplification of control, more beautiful and artistic cabinets, mechanical refinements in the interior construction, perfection of audio frequency amplification to yield almost life-like reproduction, increased selectivity, and the shielding of tuning units or entire cabinets. Further details, including prices, of any of the receivers shown may be had merely by writing a letter to

RADIO DIGEST

The distinctly beautiful Freshman console on the left, known as the 6-F-11, is the captivating product of this well-known manufacturer. Built in a rich-grained mahogany cabinet having a soft and alluring finish and equipped with a licensed cone type speaker designed especially to reproduce the exceptional quality and volume of the new and improved Freshman Masterpiece receiver, this exquisite creation has been named "The Masterpiece of Masterpieces." The receiver itself has been designed to employ the new power tubes with the result that great volume with wonderful clarity are the outstanding features. In conjunction with the "A-B-C" power supply unit which the Freshman company manufactures, the console can be operated entirely from the light socket. The mellowness of tone is really surprising, the lower notes being brought out with utmost fidelity. The new receiver is Freshman's supreme work.

A beautified front panel, graven in gold, is the pleasing contribution of the Atec receivers, the six tube T. R. F. model of which is shown below. There are but two dials to tune, and these are made conveniently large. A five tube T. R. F. model is also made by the Able Tool and Engineering company. Both cabinets are walnut finished.

A 100 per cent shielded Inverse Duplex receiver, sold in kit form in two models, a four dry cell tube and a five storage battery tube style, are the first products of the reorganized Grimes Radio Engineering Co. Above shows one assembled. All three dials are operated from one central knob, or individually.

Below at left is the revolutionary Freed-Eisemann model 800 receiver, one of a line of five to eight tube sets, built on an angle-iron chassis with complete shielding, battery cables, wave-calibrated barrel dial, and voltmeter.

"Are You Thrill-Proof?" asks the Bremer-Tully Mfg. Co., in advertising their new Counterphase-Eight, shown above. And it is a real thriller too, with four stages of tuned radio frequency operated with but one control. Perfect reproduction, a different cabinet, total individual shielding, metal chassis, and good design feature this 1927 receiver.

Show Desirable Refinements

The 1927 Crosley receivers introduce a distinctly new type of construction on a metal chassis. Below and at right style 5-50 is shown. Note single drum control.

Several new developments in Radio set construction for the coming season have been announced by Powel Crosley, Jr., president of the Crosley Radio corporation of Cincinnati. Some of the 1927 models include a method of using single dial control without loss of selectivity, all-metal chassis for mounting the parts and many other new features, such as the built-in Musicone speaker. The most outstanding of the new receivers is the five tube, single control, graphic

station selector model, shown at the top left in two views, and known as the 5-50. The set parts are totally shielded in the metal chassis, "acuminators" are provided for fine tuning, and the "crescendon" controls the volume. Similar construction is used in the high console model, known as 5-75, with the Crosley Musicone built in and space provided for batteries or eliminators, and again in the RFL-90 model which incorporates the famous R. F. L. Bridge Circuit. The RFL-90 is also built in the high console. The 4-29, 5-38, portable, "Pup," four types of Musicones, and a Musicconsole, complete the popular Crosley line.

Beautiful console models of the Grebe Synchrophase in five distinct periods constitute the offering of A. H. Grebe and Co., Inc., for 1927. The Andalusia model is pictured at the right. All metal parts are Etruscan gold, and two loud speakers are contained in the cabinet, which is finished either plain or polychrome. The Renaissance, the most expensive of all the line, is beautiful as a cathedral. Simpler models include the Puritan, Princess and Lancaster, which are not loud speaker equipped.

A beautiful, distinctive brown mahogany cabinet, small and well-finished metal panel, and simplified control mark the 1927 five tube Arborphone, shown below and made by the Precision Products Co., Ann Arbor, Mich.

Above is the new Chelsea Truphonic-Six, utilizing an entirely new system of quality audio frequency amplification, and encased in a two-tone mahogany finished cabinet with dial window indicators. Six tubes are employed. It's made by the Chelsea Radio Co.

There is hardly sufficient space to tell the many interesting and new things in the Howard S-7 seven tube, loop operated neutrodyne. It's completely shielded, dual controlled by calibrated and illuminated dials, and is housed in a cabinet worthy of a place in any parlor.

ANNOUNCE MANY BIG FEATURES FOR WEAF

INCLUDE CHAIN STATIONS IN AMBITIOUS EFFORTS

Atwater Kent Hour Becomes Full Hour
October 3—Balkite Hour with
Damrosch Begins Oct. 23

NEW YORK.—A veritable host of exceptional events to be found on WEAF's programs during the coming weeks has just been announced.

First of all, the Atwater Kent hour, shortened to a half hour during the warmer months, will again go on its hour schedule beginning on Sunday evening, October 3, at 9:15 o'clock Eastern Standard time. The chain carrying the feature will be extended to include WEAF, WEEI, WJAR, WTAG, WGR, WRC, WCAE, WTAM, WWJ, WSAI, WGN, KSD, WOC and WCCO. A galaxy of noted soloists and grand opera performers will be featured again in this weekly Sunday program.

The "Vikings" will return to the air on Tuesday evening, October 5, at 8 o'clock and will be heard each Tuesday at the same time for forty-five minutes. The same chain as above, with the exception of WRC and WGN and the addition of WFI and WCSH, will carry this feature.

Balkite Damrosch Hour Starts

On Thursday, October 7, at 8:30 p. m. a new program, that of the Schicklerling quartet, will be heard through WEAF, WEEI, WJAR and WFI. This will be a regular Thursday program.

The programs of the Balkite hour have their inception on Saturday evening, October 23, and will probably be among the most ambitious ever attempted by any broadcaster. They are now being carefully arranged by Walter Damrosch, the noted leader of the New York Symphony orchestra. The first concert will be a full symphony program by Mr. Damrosch and the orchestra. Thereafter the concerts will be arranged as far as possible in pairs each being preceded by a piano recital by Walter Damrosch. In these recitals, for which he is famous, Mr. Damrosch will discuss, explain and play important parts of the program to be sent out on the air the following week. By this method it is expected that the program will not only be of the greatest entertainment value but a liberal musical education as well. These concerts will be given every Saturday night at 9 p. m., Eastern time, over Stations WEAF, WEEI, WGR, WFI, WCAE, WSAI, WTAM, WWJ, WGN, WCCO, KSD, WDAF and WOC.

"Billy" Jones and "Ernie" Hare Return
"Billy" Jones and "Ernie" Hare have returned to WEAF's microphone and will be heard regularly now on Friday evenings at 8 o'clock with their popular programs. Their repertoire of jokes, stories and experiences has grown much larger during their vacation, and should be more attractive than ever before.

The La France orchestra, recently added to WEAF's program, will continue to be heard Friday evenings at 9 o'clock. Stringed instruments predominate in this unusual orchestra. "The Mysterious Baritone" is another feature of the La France half hour. The program is broadcast through WEAF, WEEI, WGR and WOO.

Lady Fan Asks Artist To Signal Love State

Would Have KFI Star Say It With Code of Songs

LOS ANGELES—"It's one if by land and two if by sea," said Paul Revere, before he started on his famous ride, but Paul Roberts, KFI tenor, finds that his signals are not so simple.

In his fan mail recently he found a letter from an admiring woman which asked many personal questions, among which were whether he were married, or single, young, or old, thin, or fat; whether he felt a pang of love for the unknown writer, or was he quite heartless?

Inasmuch as the type of letter practically forebade an address and a name, Mr. Roberts found it impossible to answer the questions.

A few days later another letter arrived containing the glowing idea that he should answer her secretly by Radio through a code of songs.

"If you are single," the unknown wrote, "then sing, 'All Alone'; but if you are married, sing 'The Battle Hymn of the Republic'; if you are young, sing 'At Dawning'; if you are old, sing 'Darling, I Am Growing Old'; if you want my love and want to meet me, sing 'The Hand of You' between 8 and 9 next Wednesday."

Roberts went before the microphone the following Wednesday night and sang all of the songs in one group except "The Hand of You," which he swears he will never sing again.

TRAMP CAT ALMOST MURDERS WGY STAR

SCHENECTADY, N. Y.—One of WGY's popular entertainers lingered between life and death for a few days recently, as a result of a murderous attack by a marauding cat.

Pete Van Curler is probably the youngest and the smallest Radio performer appearing regularly on a program. He has appeared as concert artist with the Hotel Van Curler orchestra every Thursday afternoon and many letters have been sent him by appreciative listeners. He is a Hartz mountain canary with a throat that emits golden music. Pete's cage is placed along side of Porter Potts, the director of the orchestra, and when the violin begins to sigh Pete just lets go with everything he has.

A few weeks ago, while Pete was perched high for the night, a tramp cat, one of the kind that nobody loves, sprang at the cage and before anyone could intervene he had reached through the wires and had dealt Pete one wicked blow with his clawed paw. Pete was in a pretty sorry state for days and it was thought he might lose at least an eye, if not his life.

However, Pete is getting better and has thrilled his friends by chirping brightly when he hears the distant music of the orchestra. He hasn't sung yet but in a few days his cage will be carried to its place beside the orchestra and he will be invited to take part again in the program.

WAVE PIONEERS MAY SOON BLOCK JUMPER

COMMERCE DEPARTMENT EXPECTS TROUBLE YET

Cooler Months Are Anticipated to Bring Fan Complaints—Little Power Required to Interfere

WASHINGTON, D. C.—Reports are current here that some of the broadcasting stations with long wave lengths will probably go into court this winter to see if they can obtain injunctions against those stations which have "jumped" their wave lengths. No such cases have yet been filed according to the information available here.

Officials of the department of commerce who are watching the Radio situation are of the opinion that the coming autumn and winter will bring considerable in the way of "kicks" from Radio listeners, because of this duplication of wave lengths. Not so many complaints have been received during the summer months, but this is believed to be because the signal strength of all stations is somewhat reduced during the summer.

Little Power Needed to Interfere

According to Dr. George C. Southworth, who has calculated the signal strength broadcast by a station and the power required to give a fairly loud signal with the ordinary receiving set, the energy of

the ether waves flowing through every square meter of a place perpendicular to a line to the station, is about a quarter of a microwatt (millionth of a watt).

This energy would have to be multiplied 160 million times if it were to be sufficient to light an ordinary 40-watt electric lamp.

Even though Dr. Southworth might have erred considerably in his calculations, it does not take a great deal of imagination to understand how delicate a Radio broadcast wave really is. No wonder we have "interference" with these delicate waves.

Tune in WGY Sept. 18 and Tell Which Set Sends Best

SCHENECTADY, N. Y.—Propagation tests on two of its three transmitters will be continued by WGY, of Schenectady, on Saturday night, September 18, on 379.5 meters. Engineers of the General Electric company are endeavoring to give Radio listeners the very best possible transmission and the cooperation of listeners is necessary.

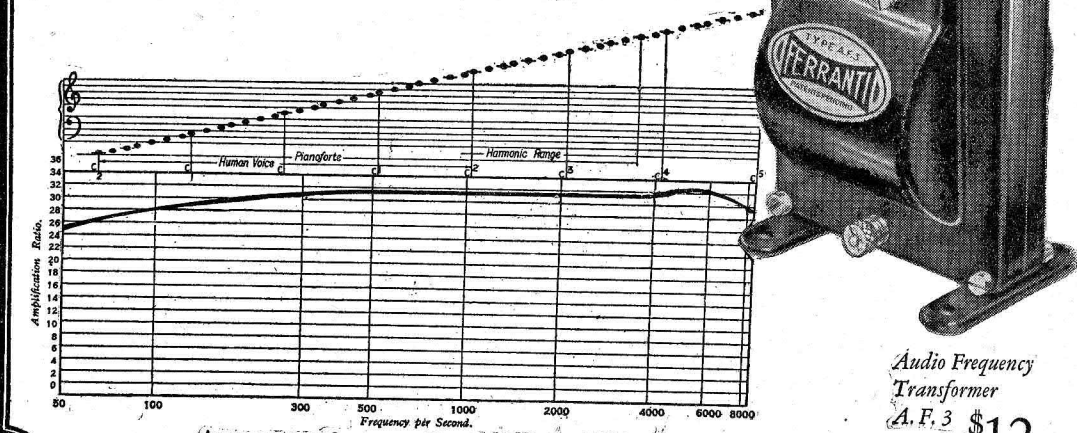

The transmitters used are known as No. 2 and No. 3. The former will be used until 9:30 p. m., Eastern Standard time, at which time No. 3 transmitter will be operated for a half hour period. At 10:00 No. 2 will be put in commission until 10:30, when No. 3 will go on the air for a period of a half hour.

The listeners are asked to compare the signal strength of the two receivers and to give their opinion of the relative reliability of the output. Listeners are also asked to indicate their preference.

THE NEARLY PERFECT TRANSFORMER

*supreme
-yes, but why?*

AMPLIFICATION CURVES. (BASED ON A MUSICAL SCALE.)

Audio Frequency Transformer
A. F. 3 \$12

THIS graph is drawn on the musical scale—the only accurate way of showing the full value of each tone which your set receives. Note that the evenness and fullness of amplification extends throughout the range of the organ, the cello, and the human voice.

Analyze these facts about the

FERRANTI TRANSFORMER

AFTER all is said, what is the truth about this transformer question? Is it important to you to get merely mediocre reception from your set, or do you value getting the very best from it that you possibly can?

The Ferranti Transformer is the Nearly Perfect transformer—nearly perfect because its amplification curve is almost a straight line. No other transformer approximates this degree of perfection.

And when you consider the fact that the scale of measurement is based on the musical scale, show-

ing as it does true transformer value as applied to any tone which you can possibly receive in your set, you will appreciate that this is the only fair method of testing transformer performance.

The Ferranti Transformer does more than act as a superior transformer. It is designed to produce that depth of tone quality which is lacking without a worthy transformer. From the low notes of the organ and the kettle drum to the high pitch of the flute and the human voice, Ferranti Transformers "carry on" faithfully.

We welcome inquiries from responsible dealers and jobbers

"GOODY GOODY GIRL"

(Continued from page 7)

them. His day had marked the climax of the family fortunes, however. By the time Lois was born they had dwindled to mere ownership of part of the original lands and these her dreamy, inefficient father had heavily mortgaged in preference to working them that he might have the more leisure for the books in the library of the old colonial house. He had left even less for his widow and daughter.

PHINEAS BLAIR with his Yankee shrewdness, his northern push and drive, had come along and married Mrs. Sylvester just in time to save the lands from passing out of her hands altogether and into the hands of those who held the mortgages. He had promptly moved his newly-acquired family out of the old home into a smaller house in Paradise. An indefatigable worker himself, he had demanded work from all those about him. Even his gentle little wife, reared to be a so-called lady, did not escape. She did her own housework and continued to do it long after the necessity for it had passed, because with affluence Phineas Blair continued tight-fisted. Under a law written in the days when the man owned everything and his wife nothing, he got ownership of the plantation when his wife died. Lois got only the burden of her mother.

She was only slightly better equipped to bear it than her mother had been. That mother had secretly hoped that the girl would fare better than she in the end. She had succeeded in getting her almost through the high school in Clermont, had managed to have her voice—it had been discovered she had one—trained to some extent, had brought into her life as many outside influences as she could before she died.

All that had come to an end when she no longer was there to stand between Lois and Phineas Blair. He turned the sixteen-year old girl into his housekeeper, drudge rather, and set his heavy foot down upon everything else. He had put her through high school, he said. That was enough education for any woman. He could not see why she wanted further training in music. She sang better than any girl he knew; she was a member of the church choir and had all the solo parts at entertainments. He had money, yes, but he had earned it and he proposed to keep it just as the law allowed. She would be sheltered, clothed and fed while he lived and in his will he would not forget her. But as for the rest—

The rest was what Lois was striking for when she stole away from his house in the night and took the road to Clermont. Neither the night nor the road held any terrors for her. Even if she had not been country born and raised the buoyancy inspired by the first real freedom in all her life would have kept her unafraid.

SHE HAD expected to walk the entire five miles, with frequent rests to ease the burden of the suitcase, but two miles away from home she heard the distant throb of a motor behind her and twin beams of light suddenly flooded the road. Her heart leaped into her throat. Had Phineas Blair discovered her absence already and was he pursuing her? A frightened glance over her shoulder showed her the car was still some distance away. She did not believe she had been seen. She scrambled down into the ditch beside the road and took refuge among the tall and dusty weeds which lined it.

The car kept on coming but it seemed to her that it had slowed down. She was sure of it a moment later when a spotlight suddenly sprang into life and began to search out the sides of the road. Looking for her? Had she been seen? Was it Blair? Was her bid for freedom from his shackles to end in being caught and dragged ignominiously back to them? She crouched deeper among the weeds.

Almost opposite her the car came to a stop. It wasn't Blair's roadster, she saw, but a touring car.

"Hello," a voice suddenly called, a youthful sort of a voice that she thought held something familiar but could not place. She did not reply and a moment later the hail was repeated. Then the spotlight came into play again, searching her immediate vicinity. Her already quick-beating heart began to race and she sought to shrink still closer to the ground. The shaking weeds betrayed her and abruptly the light picked her out.

THE DRIVER of the car left the light upon her, got out and came over to the edge of the ditch.

"I knew I'd seen a girl walking along ahead of me. What did you want to hide for?"

She rose to her feet but made no move to quit the ditch, although he bent over and stretched out his hand.

"Because I wanted you to pass on," she said, answering his question. "There's nothing to keep you from doing it now, is there?"

"Only you. It doesn't seem hardly fair

to drive away, leaving a lady standing alone in a ditch in the middle of the night. You're going to Clermont, aren't you?"

"Yes."
"Here's where you ride the rest of the way. Give us your hand. Pass up the suitcase first."

"I'd much prefer to have you go on about your business and let me walk."
"Not much. Where would our well-known Southern chivalry be then? Pass up the suitcase."

She hesitated but a moment. He spoke like a gentleman and of chivalry. Surely there'd be no danger. She held the suitcase up to him, felt it taken from her and her hand grasped in the same moment and was drawn up the bank full into the glare of the spotlight. She bent her head to keep the light from her eyes.

"Here, here. No fair." His hand touched her under the chin, pressed her head upward. "Oh!" A new note, of respect it seemed to her, came into his tones. "It's Lois Sylvester, isn't it? You know me. Herbie Coles."

THAT accounted for the familiar something in his voice. She did know him, had been a schoolmate of his for one term at the high school. The fact that it was he disturbed her. The Coles' lived over beyond Clermont, had plenty of money, but, in the language of the negroes, were not "quality folks." Herbie, she had heard, was "wild."

He tossed the suitcase in the tonneau, helped her into the seat beside the driver's and got in himself.

"Running way?" he asked presently.
"Oh, no. Just going away for a few days on a visit."

He laughed shortly. "I wouldn't have guessed it, your walking to town, carrying your things, when Phineas Blair has a car and money besides. I'll bet he doesn't know you're going."

She did not answer.
"There, I knew it," he said triumphantly. "You are running away. Going off on your own, aren't you?"

"On my own, yes, but not running away. I'm of age and free to do as I like, I believe."

"You'll find it involves paying as you go."
"Paying?"

"Yes. This ride, for instance."
"Oh, you want me to pay for it?"

"Absolutely. I'm saving you a long walk. Three miles, anyhow, and hauling your suitcase besides. But I'll let you off easy. One little kiss and we're square."

She drew away from him toward the side of the car.

"COME on, girlie. What's a kiss between old friends, schoolmates and all that? Absolutely nothing. Pucker up your lips."

"No."
Suddenly he threw out the clutch, guided the car to the side of the road and brought it to a stop.

"Do I get that kiss?" he demanded.

"Certainly not."

"I'm going to take it, anyhow." His arms suddenly went about her shoulders and drew her to him. His other hand caught the back of her head and held it while he pressed his own burning lips to hers. She began to struggle, to hammer him with her little clenched fists. One of them caught him flush in the mouth so that he released her and before he could seize her again she had opened the door and left the car.

Her toe came in contact with a large stone and she bent quickly and picked it up.

"Drop that!" commanded Herbie Coles sharply.

Instead she drew back her arm. "If you get out of that car I'll smash your face with it," she threatened.

Evidently he was convinced that she meant it. He dived into the tonneau and hurled her suitcase out into the road. "Now you can walk, you damned little goody-goody," he said venomously and threw the car into gear.

Lois made a little face toward the swirl of dust which marked his retreat. "You had a nerve to boast of Southern chivalry," she said half-aloud. "But then, you're only trash, after all."

Before she picked up the suitcase and trudged off in the direction of Clermont again she got out a handkerchief and scrubbed her lips. His had not been the first kiss she ever had received from the opposite sex, but it was the first of its kind. The others had been chaste salutes implanted upon her lips at parties or the like and had meant nothing. His had burned her, had been shot through and through with an implication of something behind it. She had not realized that so much could be conveyed by the touching of lips.

THE ENCOUNTER had not frightened her. Her feeling, rather, was one of indignation that Herbie Coles, nobody in particular for all that his folks had money, had dared to affront her. She was a Sylvester, for all that she was little more than a servant in the house of Phineas Blair. One did not paw a Sylvester or kiss her against her will. Other boys always had treated her with

The Spell of Radio Magic Unbroken!

HERE is the Radio Sensation of years —the Velvet "Jewel Case". the respect amounting almost to awe that is accorded the first families of the South. Something of the same had crept into Herbie Coles' voice when he had discovered her identity. Later, of course, he had grown bold, taken advantage of what he believed to be her helplessness, but—

"I showed him I knew how to take care of myself," she said proudly.

Leisurely as was the pace which she set herself, she came into the outskirts of Clermont before dawn. Occupants of the frame houses she passed were still wrapped in slumber as she walked along a tree-shadowed street that eventually brought her out upon the public square about the court house.

The lights of a little all-night restaurant beckoned her. It was deserted save for a combination cook-waiter with a funny little white cap askew on his head who dozed behind the counter. He came wide-awake with a start and gaped at her as if unwilling to believe what he saw. Then he became bustlingly active, and having taken her order and filled it sought to start small talk.

FATIGUE was beginning to creep upon her so she sought to discourage him by short replies. No whit discouraged, he rattled on and to get away from him she hurriedly finished the meal, paid her bill and, the suitcase grown heavy at last, went across the street and sat down upon a wooden bench on the court house lawn. She propped her elbow upon the suitcase, cradled her cheek in her palm and drifted into sleep.

She awoke with a start some time later. People were astir in the streets, business was coming to life about the square. Hurriedly she got up and found a place where she could catch a glimpse of the big-faced clock in the court house tower. Eight o'clock. Her train was due in fifteen minutes and the station was at the foot of one of the streets running into the square. Four blocks, but, thank goodness, it was down-hill.

She was still a good half-block away when a locomotive whistled and she broke into a run. To miss the train now— A moment later a line of passenger coaches slid into view, crossing the end of the street down by the station. They were going in the wrong direction, however, so that she knew it must be the north-bound express. It would meet the local she intended to take, no doubt. She left off running but continued to walk fast,

her ears tuned to catch another whistle.

It had not sounded when she set foot upon the end of the wooden platform of the station and set down the suitcase to arrange her dishevelled self and catch her breath before proceeding to the station itself to buy her ticket for Kaneville.

Then she chanced to look up and what she saw made her look wildly around her for a way of escape. Not more than fifty yards away Phineas Blair was stalking along the platform toward her.

CHAPTER III

Rescue

WHITE-FACED and trembling, as incapable of movement as if she had been turned to stone, Lois watched her step-father's long strides eat up the distance between them. The set of his shoulders, the way he moved his heavy feet down upon the platform, spoke of an attitude as inexorable as doom itself. What would he say, what do, when they came face to face?

Suddenly he turned off into the station house. A great sigh of relief welled up between her lips. He had not seen her, evidently. Now, if ever, was her chance to foil him. The paralysis induced by the shock of discovering that he had trailed her vanished as instantaneously as it had come. She glanced swiftly about her.

The observation car of the express had come to a stop just opposite where she stood. She seized the suitcase, jumped off the platform, fled across the rails and darted around the end of the car. It's heavy trucks seemed to offer a screen from those on the platform and she halted beside them. For the moment she was safe. If Blair did not find her before the local arrived she could board it from the off-side, between it and the express, and proceed to Kaneville. Not seeing her get on, he wouldn't be likely to search it.

Two cars ahead a bare-headed young man stood beside the express, chucking stones at a telegraph pole on the edge of the right-of-way. Suddenly he desisted, stared a moment in her direction, then came toward her. As he approached he opened his mouth as if to speak but closed it again when she laid a finger across her lips and flashed him a look of pleading. He nodded and went on past her around the end of the car.

Ec-centric!
the new SAAL CONE
gives scientific reproduction
of ALL tones

Your radio set gets all the sound waves now. But does your speaker reproduce all—or only part of them?

Cones—the latest development in speakers—have large conical parchment diaphragms. Hitherto, these diaphragms have been Concentric, with the stylus or actuating unit at the center.

Now the first scientifically built cone—the new Saal Cone—is *Ec-centric*. The center—literally "off center." This new construction is based on known musical laws. Note the adjoining diagram—the Saal in comparison with that most melodious of instruments—the harp. In the harp [as in the piano] long strings produce deep low vibrations. High notes require small space, short strings. Similarly in sound reproduction high notes require less space for expression than deep low tones.

These exact relative proportions of vibrating area, definitely fixed by scientific principles, are now provided for the first time by the Saal *Ec-centric* Cone. Balanced reproduction without unnecessary size.

Performance? All the music—much of which you are now missing. Operates perfectly with or without a power amplifier. Its tone is not surpassed by any speaker in the world. Completely eliminating drum or barrel effect. And at a price never before offered in a quality speaker

A highly decorative instrument with artistic scrollwork medallion and border design in gold.

A demonstration will convince you. If at all interested in radio, you will want to investigate this new principle. Write for descriptive literature. Saal Cones are fully protected by patents.

The Foremost Independent Tube In America

AT ONCE a voice hailed him from the platform: "See anything of a young woman around on that side, mister?" "A woman? What kind of a woman?" countered the man off the train.

"A two-legged woman, with two eyes, two ears, one nose—"

"Funny, aren't you?" interrupted the other. "You ought to go on the stage."

"Now, you listen, young feller—" "All right, you're forgiven. But tell me, what would a woman be doing around there, officer?"

Officer! Lois' heart skipped a beat. Blair had invoked the aid of the law. How could he? What had she done?

"Thought maybe she might be hiding, waiting for the local, figuring she's board it from the far side."

"I see. What's she done?" The man so cleverly evading the questions of the man he had called officer had put the one she wanted answered.

"That's none of your business," broke in Phineas Blair's voice. "What she's done makes no difference so long as she isn't around there. We'll have to search the train, Jed."

"Now, what good would that do? You ain't got no legal right to stop her and you know it. And I won't search no train. I told you I'd see if she got on from the far side and that's what I'll do and no more."

Lois picked up her suitcase and began edging away. When the express pulled out she would hide at the foot of the embankment until everything was quiet about the station, then—

The open vestibule by which the young man had descended gave her a new idea. Why not board the express, ride to the junction down the line and take the late afternoon train back to Kaneville?

SHE WAS struggling to throw the suitcase into the vestibule when the young man came back on a run. He took it from her and tossed it up the steps.

"Hurry, we're about to pull out," he said, put his hands under her arms and boosted her on. Then he swung aboard himself as the wheels began to move.

"Close work," he said with a laugh. "Now that you're aboard, what next?"

She explained that she intended to ride to the junction.

"You won't if the conductor sees you. This train isn't supposed to pick up passengers like this, you know. Some kind of fool interstate law. This conductor of ours is a crab. It would be like him to stop the train, put you off—"

"Oh!" Tears welled up into her eyes. The physical and mental strain she had undergone were telling on her.

"Here, here, don't start crying," he begged hastily. "I imagine I can fix things if—how game are you?"

"I'm beginning to get desperate."

"In that case—come along. Better cross your fingers, though—for luck. If we're caught—"

He picked up the suitcase and led the way into the Pullman. Not without trepidation she followed past the curtained door of the smoking room to the end of the narrow passageway into car proper. He took quick survey of the high-backed seats, then quickly opened a door marked "Drawing Room A" and motioned her to enter. When he had followed he closed the door and threw the catch that locked it.

SHE CLUTCHED at his arm. "Why did you do that?"

"To keep out intruders," he explained. "Neither the conductor nor the porter is at all likely to come, but I've friends on the train who might take it into their heads to drop in. If the door is locked they'll go away again."

"I see. It's very kind of you and I'm deeply grateful."

"Please! It's nothing at all and I'm glad to have you here, even if it's only as far as the junction. I knew this was to be my lucky day. Back there when I got off to stretch a bit before breakfast I found a four-leaf clover."

"It's good luck seems to extend to me as well," she replied entering into his whimsicality. Then she sobered: "Do you know, I don't feel quite right about this—riding without paying my fare, I mean. It seems like stealing, and only last night"—she frowned at the recollection—"I was told that being on my own I must expect to pay my way."

"Not this time. You needn't worry about defrauding the company, either. To get this drawing room I had to buy two full tickets. You're merely riding part of the distance that the unused one calls for. But—ethics are boresome subjects. Let's talk about the most interesting thing in the world—ourselves. To begin with, I'm Raymond Lancaster and my home's in Chicago."

"And I am Lois Sylvester from Paradise."

"I believe it; the Paradise part. Small town, I suppose? Sylvester means 'born in the country.' And Lois—'good,' 'de-

(Continued on page 18)

Radio batteries with a name and a reputation

THERE is one safe guide to follow in buying radio storage "A" and "B" batteries—the name of the battery and the reputation of the manufacturer. Neither the appearance nor the size of a battery can be used as an indication of the radio service that is locked up in these black boxes and glass jars.

More than twenty years ago, Prest-O-Lite gave the motor-car its first really dependable light, and since that time Prest-O-Lite has more than kept pace with the ever-changing motor industry.

When the miracle of radio came, it was only natural that Prest-O-Lite should make batteries especially for this new industry; batteries which because of their unexcelled quality have added to the reputation and prestige of the name Prest-O-Lite.

These batteries were perfected in the world's largest electro-chemical research laboratories. They are made of the finest materials. Every user of a radio can depend upon Prest-O-Lite Radio Batteries to deliver their rated ampere-hour capacities and to insure good clear reception.

Prest-O-Lite Batteries are attractively priced from \$4.75 up. It is unwise to take a chance on batteries of unknown make. Ask for Prest-O-Lite.

JEWELL ELECTRICAL INSTRUMENT CO.

1650 Walnut Street - CHICAGO

"26 Years Making Good Instruments"

DON'T THROW AWAY YOUR RECEIVER YET

"EVERYTHING'S GOING TO BE ALL RIGHT" IN 1933

Dr. J. H. Dellinger Tells About Sun Spots and How They Spot Up Reception

WASHINGTON.—Cheer up! From 1928 to 1933 Radio reception conditions should improve, reaching their best in the latter year.

So speaks the bard of the bureau of standards, Dr. J. H. Dellinger, in explaining to the layman the sun-spot Radio interference theory, which observations have practically proved correct.

During the first part of 1926 experienced listeners will recall that reception conditions were below par and quite freakish. Dr. Dellinger explains as follows:

"Sun spots throw out enormous eruptions of electrons and other electrical particles some of which reach the earth's atmosphere. When the sun spots are particularly intense, Radio reception is apt to be disturbed and poor. This has not been conclusively proved, but seems to be indicated by such observations as have been made.

From Bad to Worse, Then Good

"The sun spot cycle is eleven years, that is, there is a minimum of spots on the sun for a time, after which they gradually increase and pass through a maximum and return to a minimum, the whole occupying eleven years. The last sun spot minimum was in 1922 and it would be inferred, therefore, that Radio reception at its best in 1922, should be progressively worse to 1928, and that in succeeding years reception conditions should improve and be at their best again in 1933.

"It will be interesting to see whether this occurs and whether future observations on sun spots will show a closer correlation with Radio reception conditions."

Musicians Operate WLWL

NEW YORK.—Every member of the staff of Station WLWL of New York who has any monitoring of programs to attend to is a trained and accomplished musician.

IMPERIAL IMPS TRY TO BECOME ANGELS

NEW YORK.—The Radio audience nearly lost two of their favorite entertainers in a recent railroad catastrophe in New Jersey. The Imperial Imps, featured Wednesday nights at WJZ, were seated in one of the cars of a train which met with an accident, but in spite of the fact that they were severely shaken up and sustained minor cuts and bruises, they escaped serious injury.

Snappy "Air Copy" Is Promised

WASHINGTON, D. C.—Sam Pickard, chief of the Radio bureau of the United States department of agriculture, has added two new trained writers to his editorial staff. They are Miss Josephine Hemphill of Kansas and Solon R. Barber of Utah. Both have had practical experience in writing for metropolitan and rural readers. Samples of their products are to be distributed to the broadcasting stations within the next few days.

Greenwich Village Is Invaded by Radio Men

Promoter Irwin Buys "Club Circus" and Re-Opens

NEW YORK.—Greenwich Village has been invaded by the Radio industry. G. Clayton Irwin, Jr., has purchased the Club Circus, 160 W. Fourth street, at the corner of Sixth avenue.

Mr. Irwin will conduct the Club Circus on a more lavish and impressive scale, and alterations will be made to enhance the exterior as well as the interior. The dance floor is the largest in Greenwich Village. The finest artists will furnish entertainment every evening. The Club Circus will become the New York entertainment headquarters of the Radio industry.

Mr. Irwin is general manager of the Radio World's Fair, now on in New York city, and of the Chicago Radio show—the principal expositions conducted officially on behalf of the Radio industry by Mr. Irwin in partnership with U. J. Herrmann, New York and Chicago showman.

WOK AMBITIOUS; GETS SUPERPOWER STATION

20,000 Watts Power and Improved Antenna Are Added

CHICAGO.—After broadcasting a year on 5,000 watts power, Station WOK of Homewood, near here, will step into the real superpower class within the next few weeks, according to Norman E. Wunderlich, chief engineer.

This will be done by installing a 20,000-watt transmitter, more than doubling the height of the antenna towers, and using a new type of antenna designed to greatly increase signal strength. The new towers will be 200 feet high.

In addition, WOK has just completed the installation of an 8,000-watt transmitter, which will be used for experimental purposes and in emergencies.

The new antenna will be in the form of an inverted cone. This antenna was designed by Prof. J. T. Tykociner of the University of Illinois, who declares that experiments have demonstrated that this cone type of antenna will improve radiation efficiency about fifty per cent.

From "Consort" to Symphony —from Radio to Thorola Art

The first known representation of an Orchestra dates from about the year 1000 A. D.

The first crude orchestras were described as mere "consorts of flutes and viols". Compare this with the limitless tone effects of the modern symphony orchestra. A great advancement of course. Yet we truly believe you are bound to discover just such advancement in Thorola radio.

Thorola clearly marks the end of those days when the scientific wonder of radio could excuse artistic compromise. The flawless reception of pure, unblemished music and distinct, natural speech is the greater wonder of Thorola instruments.

Relentlessly all the old radio "disturbances" have been downed. As the pioneer American builders of long-distance acoustic apparatus we were ideally equipped for the task. We were able to originate Thorola Low-Loss Doughnut Coils making selectivity positive—concentrating full power on the wanted station only—and eliminating internal interference and circuit confusion, so that the remaining difficulties revealed themselves and

could be methodically conquered.

We also created Thorola Golden Tone transformers, balanced and sensitive to a degree never before considered commercially feasible. It was one more example of the attainments to be expected from an establishment which was one huge acoustics laboratory long before radio began!

And we already had the loud speakers whose brilliant clarity and fidelity, at any volume, admittedly improved all receiver performance.

Yet all of our highest technical achievements—so far ahead scientifically—should not mean as much as your ear in selecting radio! Unless you go and hear 1927 Thorola models you run the risk of owning radio that is already outdated. Whatever style you desire—console, cabinet, cone speaker, or horn speaker—the Thorola representative has it. He welcomes the most critical consideration. He will show you the first radio receivers with provable upkeep economy!

REICHMANN COMPANY, Chicago, Member R.M.A.

Thorola

(Western and Canadian prices slightly higher)

MODEL 57 CABINET . . . \$60

Thorola radio at such a price seems unbelievable. Antique, Highlight Walnut finish and charming proportions distinguish this cabinet. It gives you the genuine Thorola 5-tube circuit, whose many special features insure performance which cannot be measured by any previous standards of power or hook-up.

MODEL 59 DE LUXE CONSOLE (Illustrated) \$185 MODEL 58 \$125

A receiver with two speakers—the Thorola Cone and the Thorola Horn type! Perfect reproduction facilities for every radio impulse. Of course the 5-tube Thorola Circuit brings them all in clearly, with its exclusive Doughnut Coils, Golden Tone Transformers, Duo-Dial Control, Power Tube, and other great advancements. Their advantages make it literally impossible to judge Thorola receivers by the old formula of power-ratings. In fact, Thorola developments mean more power, and

more operating economy as well! The cabinet, in Antique, Highlighted Walnut, is a furniture masterpiece: comparing only with the rich artistry of Thorola reception.

Full Thorola performance and economy characteristics are offered at a moderate price in Model 58. The Console is of Antique Highlighted Walnut, as in the most luxurious Thorola models. All the Thorola circuit and speaker features assure unsurpassed radio.

FURNELL

Conceded to Be the Most Practical Straight Line Frequency Condenser Ever Designed!

Illustrating the application of the aluminum electrostatic shield provided for preventing the emanation of stray currents therefrom.

Cross sectional view of the Furnell, showing its mechanical construction, also the tapered concentric rings.

The Furnell spaces the stations equally over 360 degrees of shaft movement, a complete rotation of the dial. No crowding of low wave length stations. No need for a vernier dial.

Radio experts praise the Furnell because it represents the finest condenser workmanship available today. Because it gives to radio reception a degree of tuning perfection heretofore unattainable.

DUST PROOF. DAMAGE PROOF. ELECTRO-STATIC PROOF.

The smooth operation of the shaft and slider affords a degree of accuracy and precision unattainable with the ordinary type of plate condenser.

"GOODY GOODY GIRL"

(Continued from page 16)

sirable. I think you live up to it; the desirable part, at least."

Under his quizzical eyes she flushed. "I'm good, too," she said quickly, then hurried on: "Your name, what does it mean?"

"Raymond means 'wise protector.' Haven't I lived up to it? Didn't I protect you back there from the yokel with the pirate mustaches and the big tin star—"

"THAT would be the constable, Sim Pruitt," she chuckled, recognizing the description. "The other was my step-father."

"Who had no legal right to stop you but was going to, anyhow, eh? He looked about as amiable as a hungry crocodile. I suppose you're running away from his brutalities, or is it that you're going to meet a man?"

"Neither. I have no sweetheart and Phineas wouldn't dare to beat me. I'm a Sylvester, you know—of the Sylvesters," as if that explained everything. "And I'm not exactly running away, either, just asserting my independence by going off on a visit to a girl I used to sit with in school. I'm coming back in a few days. Phineas told me I couldn't, so last night as soon as he went to sleep I slipped away, walked to Clermont, back there where I got on—"

"Good Lord! You've been up all night? Why, you must be dead on your feet. No breakfast, either, I suspect—"

"Oh, yes, in a restaurant when I got to town, but," she smiled wanly, conscious of her weariness, "I am tired."

"Look here," he said, getting to his feet, "why don't you go in there," indicating the washroom, "bathe your face and hands, change your things if you wish, then lie down here on the lounge? I'll run along to the diner, have my breakfast and come back in time to see you off at the junction. How's that?"

"Fine," she assented. "A wash and a brush-up, to say nothing of a chance to stretch out for even a little while—"

"I'm off, then. You'd best get over there, out of sight, while I open the door. No one's likely to disturb you. Ah, coast's clear. So long."

He slid through the half-opened door and she threw the catch.

"WHAT a gentleman he is," she mused as she ran water into the washroom basin. "Not like Herbie Coles at all."

Raymond Lancaster, she guessed, was somewhere in his early thirties. Well-to-do, if she was any judge. His neat, well cut clothing was expensive, though quiet. There was something, too, about his clear cut features, the eager blue eyes, the way he carried his head, that spoke of birth and breeding. She didn't feel in the least frightened with him, for all she was doing a most unconventional thing and one that would have shocked folks back in Paradise—Miss Wexby, for example—within an inch of their lives.

"I don't suppose I'll ever see him again after I get off at the junction," she said as she lay down upon the lounge and was conscious of a tinge of regret that it was to be so. She sighed with comfort, relaxed and closed her eyes, listening to the clickety-clack of the wheels on the rails.

"My God, wake up—quick!" she heard a voice saying in her ear, but a moment later it seemed. She opened her eyes to find Lancaster bent over her, his hand on her shoulder.

"I must have fallen asleep," she said smiling brightly at him.

"Asleep! God! I thought you were dead. You'd locked the door . . . I tried to arouse you without letting everyone in the car know . . . I was almost frantic . . . finally bribed the porter to use his key—"

SHE SAT up quickly, wide-awake now, and his white face aroused a pang in her. "Oh, I'm sorry," she said contritely. "I had no idea of falling asleep, but I was so tired. Are we near the junction?"

"The junction!" he almost shouted. "Don't you realize you've been asleep for hours? We passed the junction a hundred miles back and now—"

She gave a little cry of dismay and one hand fluttered to her breast. "What a lot of trouble and worry I've caused you."

"You don't know the half of it. The worst is yet to come. You can't get off this train until we cross the state line into Illinois. Quarantine. There was an outbreak of yellow fever, almost an epidemic, down in New Orleans. That's why the train is so crowded. Everybody running away. This state has quarantined against everybody coming from down that way. Nobody can leave the train. Can't even have the windows up. Men with rifles and shotguns at every station—look here, is there anybody back home to be alarmed or worry or start a search—"

A New and Essential Radio Accessory

THE latest development in radio accessories is the Belden Fused Radio Battery Cord, with two enclosed fuses to protect the A and B-Battery circuits.

This remarkable and efficient fused battery cord acts as a safety valve for your radio set; it protects the batteries from accidental discharge, and likewise eliminates the fire hazard from crossed wires.

The Belden Fused Radio Battery Cord makes a neat installation by dispensing with the usual array of loose wires behind the set, and it protects tubes from burn outs.

Ask your nearest radio dealer today for a Belden Fused Radio Battery Cord, sold only in the Belden striped orange and black carton. Your set is not complete without the protection of this essential battery cord. It is inexpensive insurance against fire hazard and costly short circuits.

BELDEN MANUFACTURING CO., 2310A S. Western Ave., Chicago, Ill.

The A-Battery and B-Battery fuses are enclosed in a neat bakelite cover that is easily opened to permit inspection of the fuses. The fuses are not interchangeable with each other, nor with automobile fuses, so wrong fuses cannot be used accidentally. New fuses can be obtained from your dealer.

SONG CENSUS TELLS FAVORITE NUMBERS

McQUHAE REQUESTS SHOW LIKES OF LISTENERS

Irish Tenor Builds Programs to Please—Finds Old Sentimental Compositions Most Popular

NEW YORK.—A national census of songs that live is being made by Allen McQuhae, Irish tenor, who conducts the Sunday evening Atwater Kent Radio concerts this summer. The songs of the series are chosen from requests from listeners. The census is expected to reveal not the "hits" of the day, which, after a wave of popularity die out, but the songs that live through the years.

Mr. McQuhae's list of songs requested already runs far above five hundred. To sing all of them he estimates it would take him more than six months in half hour weekly concerts. He selects those, however, for which he receives the greatest number of requests each week and places them on his Sunday evening program.

For example, Mr. McQuhae says no one has yet asked him to sing "Yes, We Have No Bananas," while hundreds have requested such fine old favorites as "Silver Threads Among the Gold," "When You and I Were Young, Maggie," and "Believe Me If All Those Endearing Young Charms."

Sentiment Is Popular Motive

Requests for the songs popular during the late war are not numerous and as yet only one man has asked Mr. McQuhae to sing "The Star Spangled Banner."

Mr. McQuhae's census is expected to be an excellent guide for ambitious song writers as to theme and character. Sentiment is shown to be the prevailing motive in the songs most called for, with the themes of lost sweethearts, mothers who have gone and inspiring songs of religious character predominating.

"Danny Boy" led in popularity for the concert sung by McQuhae August 22. "The Last Rose of Summer" led in popularity for the concert August 29, followed closely by "Killarney" and "Duna," with "Because" and "Then You'll Remember Me" sharing honors for third place in the esteem of listeners.

HERE'S LATEST ONE ON COWS AND MUSIC

LONDON, England.—Recently a small Cheshire farmer, who kept a herd of Jerseys, made the discovery that the cows both yielded better and were more easily handled when they were milked to music. Prior to the introduction of music he had noticed that at milking time they had frequently been awkward to handle. A phonograph has since been replaced by a Radio installation which has been found equally if not more effective.

Probe Alleged Radio Monopoly

WASHINGTON, D. C.—Officials of the Federal Trade Commission will proceed with the taking of testimony in the so-called Radio monopoly case at Seattle, Wash., on September 27. The testimony will be taken later at San Francisco.

NEW LINK IN EAST BEGINS OPERATING

Embraces WNAC, WEAN, WLWL, WRNY and WODA—Toll Programs Object

NEW YORK.—Five prominent Eastern broadcasting stations have hooked up for chain broadcasting service beginning this month, according to an official statement issued by the Commercial Broadcasting corporation from their offices here.

The participating stations are WLWL and WRNY of New York city, WNAC of Boston, WEAN of Providence, R. I., and WODA of Paterson, N. J. Negotiations are now under way to secure additional tie ups with stations in Philadelphia, Baltimore and Pittsburgh; while two Chicago stations have expressed a desire to join the chain as soon as wire facilities have been extended that far west. A two-way land wire system permits a complete

interchange of programs originating at any station of the chain and rebroadcast by all other member stations.

Richard E. O'Dea, president and program director of the Commercial Broadcasting corporation, has owned and operated Station WODA for more than two years. William F. Hart, vice-president in charge of the contract department, has been connected with Stations WHN and WGCP as commercial manager for the past three years.

New "Big Brother" at KPO

SAN FRANCISCO.—A group of additions and changes in the staff of KPO have been announced. John Ames Keough becomes "Big Brother," succeeding L. R. Tucker, who will leave KPO. Keough is well known to the followers of "Big Brother," having conducted the hour for several months about a year ago. Albert J. Hodges, Radio engineer of many years' experience, has been named chief technician and Robert A. Lilly has been appointed special representative. Clair E. Morrison, announcer, has been given the additional duties of studio manager.

There's sound sense in quiet charging—

Clear, full, volume in your reception is the only way in which your Rectigon "makes itself heard." All because of the wealth of pep it packs into your batteries. But you'll never hear a peep from a Rectigon, itself, while it's doing its charging job. Not a murmur—not a bit of fuss. It's so quiet it wouldn't disturb the snooze of the lightest sleeper. Rectigons are popular for home charging because they do away with even the slightest annoyance and bother.

when you keep batteries lively with

The Westinghouse Rectigon Battery Charger

©, 1926, W. E. & M. Co.

THE RECTIGON'S a superb Westinghouse product. Things you *can't* see, like extra heavy insulation, things you *can* see, like the durably enameled case—all are of highest quality. Westinghouse also manufactures a complete line of radio instruments, and Micarta panels and tubes.

Heavy-Duty RADIOHM

for Simple Control of B-Battery Eliminator

A SINGLE turn of the knob gives full resistance variation to control the output voltages of your "B" Battery Eliminator. Resistance remains as adjusted no matter how often knob is set. Insulated for 1,500 volts.

This high quality Centralab Heavy-Duty Radi-ohm, approved by Raytheon Laboratories, will remain smooth and noiseless, outlasting your eliminator and giving you full efficiency from it.

\$2.00 at your dealer's, or mailed direct on receipt of price.

CENTRAL RADIO LABORATORIES

12 Keefe Ave., Milwaukee, Wis.

Makers of a full line of variable resistances for 69 manufacturers of leading standard sets.

Centralab

No acids, no chemicals—no moving parts—nothing to spill or burn. No muss, no worry. You'll have no spoiled rugs, no ruined clothing.

Saves its cost in short order—Count the dollars spent in a few trips to the service station and you'll hotfoot it for a Rectigon, for the good it does your pocketbook as well as your batteries.

Snaps on in an instant—Just plug into the light socket, snap on the terminals. Saves service station bother. Spares interruptions caused by absent batteries.

Charges both "A" and "B" batteries—Keeps both packed with power. Bulb is used for "B" battery charging and it is enclosed, like all other parts, in metal, safe from accident. (Rectigon charges automobile batteries, too.)

Perfect safety for your set—If you tune in while you're charging there'll be no harm either to set or batteries. Nor will batteries be discharged if anything happens to the current while your Rectigon's attached.

No Storage Battery Radio is Complete Without a Rectigon

SHORT WAVES

By Marcella

(Continued from page 2)

Margot: Can I tell you a whole lot about J. T. S., the announcer for WHB? I did last June, but will repeat briefly. John T. Schilling, the likeable blond voice of WHB, is 5 feet 10 inches tall, weighs 165 pounds without contours, is 29 years old, has blue eyes to go with his straw blond hair, looks nice in a dress suit, likes musical instruments in tune, good cigars and his wife, and dislikes artistic temperaments. Yes, he was married last fall. He met her in the Sweeney school studio. . . . all of that sort of thing.

"Two Radio Nuts": I don't think Eddie Ellingson of KFAB and the "Harmony Boys" team of Eddie and Gloomy is really "hard-boiled." He is really quite a sheik, and "Gloomy Gus" Gayle Grubb claims that he has to watch Eddie very closely when he takes him out among the ladies. Eddie is about 24 years old, stands 5 feet 10 inches high, has gray eyes and dark brown, wavy hair, and is still among the unmarried. Gloomy proclaims that his eyes are blue except when his wife hits them, and then they are black.

What hair remains is mahogany brown, after a heavy meal his weight is 150 pounds, and on a crowded street car his height is 5 feet 11 inches. Gloomy's age is 30, and he has one child, a girl, who will probably be a Pi Phi (if you know what that means). Mr. Grubb's forte, besides selling Buicks and GMC trucks for the Nebraska Buick company, is composing songs. Ref. "I Don't Think So" and "Etiquette."

Sally and Susanne: So you want to know all about Peter MacArthur of WOC, and whether or not he happens, also, to be "Tom Thumb"? Well, what do you think—here's his own answer: "I was born in Greenock, Scotland, 39 years ago. As to personal appearance, my hair is a matter of controversy, I insisting that it is dark brown, and some of my friends (me, too, Marcella) holding out for black. The eyes, however, I believe are mates and dark brown. The question of height I am not so sure about, but should judge it is somewhere in the neighborhood of 5 feet 8 or 9 inches. Matrimonial state, hm-m-m-m! Now that is a sticker for such maids as Sally and Susanne! My photographs all show me wearing a smile, genuine or otherwise, so use your own judgment. On second thought, if you are sure it won't be too

(Continued on page 23)

It's meaningless until you know that in radio it stands for a tube that will—

- Give your receiver clearer and sweeter tone on local and distant signals
Reduce noise in comparison to signal strength
Increase volume on local and far away stations
Better year-round performance
Widen reception range

BRITISH WILL TRAIN MIKE DRAMA ACTOR

ORDINARY ACTORS FAIL TO ENUNCIATE PRECISELY

Royal Academy to Teach Special Class Beginning in October—Hope to Develop Art

LONDON, England.—The British Broadcasting company is hunting vigorously, but so far fruitlessly, for a voice. It is a very elusive voice, as clear as a bell and yet full of personality, and very few people apparently possess it.

Even the best actors and actresses have to admit that they have not got the ideal broadcasting voice, and fresh blood has to be found to take parts in the rapidly developing field of Radio drama.

R. E. Jeffrey, production director of the B. B. C., and Kenneth Barnes, director of studies of the Royal Academy of Dramatic Art, the leading British dramatic academy, have hit upon a bright idea for training the future actors and actresses for the ether.

Must Train Differently

Students at the Royal Academy will undergo a special course of training so that any talent they may have for speaking into the microphone may be properly fostered.

"Now that Radio broadcasting has become a permanent institution," said Mr. Barnes, "I feel that two kinds of actors

will have to be trained in the future, one for the ordinary stage and one for the Radio. In many cases experience has shown that ordinary actors are not a success before the mike.

"No matter how clear and good one's voice may be, some vowels and consonants may be slurred over in ordinary speech.

"Twenty-five students will be the first to take the course, and we shall start in October. We shall reproduce a small studio in the building by which microphones will be connected to loud speakers in another room. In this way both the examiners and the other students will be able to judge the results."

"Happy Harry's Party" New Saturday Night WQJ Stunt

CHICAGO.—Each Saturday night beginning at midnight "Happy Harry" turns WQJ's studio here into a veritable throng of imaginary visitors with a new and novel little originality he calls "Happy Harry's Party."

Listeners sending in telegrams are the supposed visitors to the studio and Harry's imagination in introducing the visitors leads the listeners to actually believe he has a studio full of out-of-town-ers, when in reality there are none.

Epworth League Rally To Be on Air, Sept. 19

KDKA and KYW Will Participate in Broadcast

CHICAGO.—The Rally Day services of the Epworth league, an organization of young people of the Methodist Episcopal church throughout the country, will be given on Sunday, September 19. The services in Pittsburgh will be broadcast by Westinghouse Station KDKA and those in Chicago will go on the air from the Evening American studio of Westinghouse Station KYW.

KDKA will go on the air at 4 p. m., Eastern Standard time, and will broadcast one hour's program made up of special music furnished by the Epworth leaguers of the Pittsburgh conference.

The program from Chicago will immediately follow the one hour of music from the studio of the Evening American, which will put the Epworth league broadcast on the air at 4 p. m., Central Standard time, or 5 p. m., Chicago daylight saving time. Music will be furnished by solosists and quartets.

America First to Send Voice on Ether Waves

Foreigner Claims Honor But Is Predated Four Years

NEW YORK.—Raymond Brailard, president of the technical commission of the Union Internationale de Radiophonie, claims to have been the world's first broadcaster of entertainment by wireless telephony, according to a letter recently received here by Eric Palmer. But this is not true.

Mr. Brailard sent voice and music on what was then known as an "arc humide" in 1913. On the other hand, arc transmission of voice and music as a regular proposition was a feature of an American station at San Jose, Calif., as early as 1909, thus predating Mr. Brailard.

Tube transmitters such as are used today for carrying sound or telephony were just being developed about that time. Dr. Lee DeForest, the American who invented the three electrode vacuum tube, is probably the first man in the world to have broadcast voice or music by means of a tube transmitter.

Tempting 1927 Models

INDIAN Summer is here, and with it has come a marvelous array of beautiful, simple to operate, pleasing to anticipate, tonally perfect receivers. Of course, most of us have receivers, bought this year, last or several years before. But the 1927 models are tempting!

Having conquered the technical obstacles of previous years, most manufacturers have now turned their energies to the equally necessary problem of designing their sets mechanically perfect, artistically things of beauty, fool and trouble proof, and so simple to operate that even a two-year old can be taught to do so.

That the manufacturers have succeeded admirably in their program is proved by the receivers on display. Several pages of this issue of Radio Digest are devoted to the new models. The dealers are exhibiting them in their windows and the receivers may also be seen at many Radio shows and fairs. They are attractive, aren't they?

Even to an oldtimer who is well enough educated in the dial twisting art to handle the most complicated of the antique and complex receivers, the new sets present a most alluring appeal. Of course, friend wife has a lot to say about how much nicer the new ones appear in the parlor—and, besides, the Jones' have one!

Darned if we are going to wait until all the Joneses and Browns get theirs. Guess we'll have to sell our old set to the janitor, or say, Mr. Dealer, what will you allow me for this one on a trade-in on that new one over there?

Good "Broadcasting Business"

TO ENTER the "Broadcasting Business" for purely commercial motives without thought for the kind of transmission sent out, is the object of entirely too many business concerns, churches and schools. Too few broadcasters make a conscientious effort to keep their stations strictly on their announced wave lengths. The slight variation from their wave lengths or frequencies may not seem great at the station transmitters, but when these variations mix with one another, the poor listener can only "stand by" and suffer from the "heterodyne" interference created.

The bureau of standards recently issued a list of twenty-nine broadcasters who adhere to their wave lengths with high accuracy. The bureau modifies its list by saying that there might be more stations thereon if there were bureau experts enough to place in various parts of the country and measure all the transmitters. But, anyway, we will publish the list, as follows, so that listeners will know that at least these stations are interested in good transmission:

WOC, Davenport; WTIC, Hartford; WMAQ, Chicago; WCCO, Minneapolis; WWJ, Detroit; WLS, Chicago; KFAB, Lincoln, Neb.; WJJD, Chicago; WEAO, Columbus, Ohio; KFKA, Greeley, Colo.; KFH, Wichita; WENR, Chicago; WCAD, Canton, N. Y.; WAAM, Newark, N. J.; WSKC, Bay City, Mich.; WOWO, Fort Wayne, Ind.; WBBM, Chicago; WEBQ, Harrisburg, Ill.; KFVS, Cape Girardeau, Mo.; WOK, Chicago; WPDQ, Buffalo, N. Y.; WEA, New York; WCAP (now combined with WRC), Washington; WRC, Washington; WJZ, New York; NAA, Arlington, Va.; WGY, Schenectady, N. Y.; WBZ, Springfield, Mass.; KDKA, Pittsburgh.

The 60 Per Cent Service Pests

THE SAD life of the Radio dealer's service man is convincingly described in this number. At the conclusion of the interview with the service manager, the latter classifies sixty per cent of the average trouble calls as coming from people who don't know about Radio, but who think they do, and cause trouble in the sets. Then the service man is called, and the dealer or the service man is blamed for causing the trouble.

We have the solution for this "pesty" sixty per cent. If we were a Radio dealer we would double our service charge for calls from such people.

RADIO INDI-GEST

Wonder What a Radio Thinks About?

(With apologies to Briggs, the cartoonist)
"Last night you cussed me black and blue—
Used every name you could.
It wasn't me—I did my best—
The weather was no good."

"And now tonight you're all upset,
Because your friends are here,
And I don't work just like I should—
Stop poking me, you hear?"

"There's nothing wrong with me at all,
Your batteries are low;
What if your friends are going home?
I'm glad to see them go."

"Quit fooling with my wires, gee whizz,
You've got them all so sore;
If you don't stop your foolishness,
I won't play any more."

"You brute! Go on and curse some more—
You don't hurt me a bit;
I hope you go to bed again
And leave my tubes all lit."

CHARLES ALLEN BRANHAM

SHORT SHAVES

By Barbara

"Old King Tutt, Hiz-self" writes a most chaw-ming letter, which I, being modest, must quote from an answer herewith:

"Why pull your 'Short Shaves' out of print so soon? Don't you know it fills a long-felt want? The newly-weds can learn how to cook from Betty and the flappers and drug store cowboys get the dope they crave from 'Marcella,' so why not put 'Short Shaves' back into commission and give us the low-down on the distinguished contributors of your column?"

Well, King, your highness, it's like this. I've been baiting up at Paul Smiths for Cal Coolidge. Y'see Marcella went fishing on Lake Vermilion, so I went her one better and went baiting for Cal. That's why he caught the fish. You shoulda seen the ones that got away.

Please tell you, "Does the Third Trombone Player really make music on a trombone, or does he just blow on it and make a noise, or perhaps he has plugged the lower end of it for a stein?"

Answer: The Third Trombone Player was kicked out of the Milwaukee Symphony orchestra for blowing a sour note. It is rumored that this was caused by stale beer clogging the mouthpiece. He is married to a wife and his hobby is reading "Condensed," by Dielectric.

No, George isn't the George that everybody lets do it. His contributions give me no evidence as to whether or not he wears socks. I have strong suspicions that he does not. I also understand that he is a poet.

Sorry I must close now, as a great big whale just snapped the minnow off "Prexie's" hook, and I must bait it again for him. Good night, kid-deeeeeesssssss.

Silent Night

Of all the sad surprises
With this none can compare,
To try to get a station
That isn't on the air.
"That Red Head Gal," BOBETTE W.

Always and Always

Dear Indi: The great contralto arranged her Lady Duff Gordon gown with infinite care. She touched her hair daintily so that each strand was meticulously in place. She bowed her lips and powdered her nose with more infinite care. . . . The great audience was waiting—

"Ladies and gentlemen," spoke the Radio announcer, "Madame Jupre will now sing 'Always.'"

ARTHUR LARSON

Our Anagram Department

For such it must be labelled, since George has forsaken the gentle art of poesy and devotes all his spare time to finding more words and phrases utilizing the same letters as are contained in the title, "The Radio Digest." Here they are:

The air tides God.	O, I'd edit the rags.
The Air tides dog.	The idiots raged.
Editor hides gat.	Airs the tied dog.
God edits the air.	It's a tired he dog.
Dodge, it's the air!	It's a dirte he dog.
It dodges the air.	Dogs the air tide.
The editor sighed.	Dave tie this dog.
Editor is the dog.	This dog are tied.

Intermission Idiosyncrasies

A. C. S. Announcing

"At 10:45 this evening, we will broadcast a vocal selection, Over the Hills and Far Away, which will be rendered by Jimmy Whitmore Valentine, an industrious man about town—when the police are not watching him too closely. What made this a sad world for Jimmy was an account in a local paper of how he had overlooked fifty thousand dollars in brand new ten-dollar bills when he had called recently on a local banking institution."

ARTHUR C. STOWELL

FRANQUE'S FILOSOFFEE

Spare the batteries and spoil the concert. **INDI**

The Big "Noise"

Condensed

BY DIELECTRIC

The bicycle playing card sextet that entertains from the studio of Station WSAI, Cincinnati, deserving of a following, which it, no doubt, enjoys. There work is well done, adding a splendid feature to the station's programs. We are gradually finding an increased number of quartets, trios and sextet vocal and instrumental, which serve to expand the field of musical entertainment. More real good instrumental quartets would not glut the market. This is one of the stations utilizing the programs originating in New York and transmitted from the station, WEA.

There must be at least one reference to a day program this issue or it won't seem complete. What that one terpsichorean star performance came from Atlanta—Station WSB. The musicians played the selections wonderfully well, feeling the rhythm each number in a manner to enthrall half-hearted dancers to "step out." The announcements which came between the numbers were given briefly, tirelessly without intent to put the announcer in limelight, and clearly named the selections to follow all without losing several precious minutes in trying to find something facetious to say.

Station KDKA, Pittsburgh, has entertained quite satisfactorily with programs from the Grand theatre in that city, municipal concerts of varied attractions and in presenting some soloists with more than ordinary attainment. Your reviewer was particularly pleased with the playing of a 'cellist in a quartet appearing before their mike. Such a statement might imply that the four players were not evenly balanced, allowing the 'cellist to predominate, which would be untrue. They were very well balanced but so well did this one artist perform it was impossible to ignore his accomplishment.

It must be admitted that a straight piano concert is not a feature to draw the multitude, even when rendered by a celebrated artist. We heard from Station WAIU, Columbus, Ohio, a group of concert positions played by a not unusual performer and remained until the last selection had been played. The execution of these numbers was not all one could desire, the fact of its being an "all American" program made one wish to review that portion of our masterpieces as presented. We too often forget the size of our own library of good music—having real gems fashioned by American composers.

There is another musical organization to which attention should be directed at this time, although some located where Station WHO, Des Moines, cannot reach at this season there may be less interest. Mention has been made in these columns of the Bangor Life trio at times when their music carried many states and nearly always brought comment of a favorable nature. You will find these players just as worthy of a hearing now as in months past and their programs are attractive in the main.

Finally, I wish to record a personal debt of gratitude to one of the artists appearing in the studio Station WHT, Chicago. The 'cello has an appeal (when capably played) to displace that of most other instruments and, as Ann Slack played her selections the other evening, it seemed as though a whole evening would not be too long a time to listen. Miss Slack possesses a charm to her playing which, when coupled with a most ingratiating tone makes you close your eyes and revel in the opportunity at hand. Please encore.

BROADCASTS RADIO INDUSTRIES BANQUET

RESPONSIBLE for a program which millions will listen to are the members, above, of the entertainment committee for the Third Annual Radio Industries Banquet which is to be broadcasted from thirty-three stations. In the picture: Frank Spring, WEA; Paul Eveready; C. P. Popenoe; J. J. Andrew White, Jack Adams; fohn Musical bureau. Jeanette Lotz, left, is a soprano who remade her debut from Station and is now appearing regularly in programs. She has the distinction of having sung before President Roosevelt of Cuba. Her training under Damrosch, Alexandre Bonace and Roschowsky has well-equipped her for before large Radio audiences. Branton, right, is the pianist who has pleased fans listening to WJLB, Clearwater.

Senorita Raquel Nieto, formerly of the Mexican Grand Opera, and now a resident of Los Angeles, is heard weekly over Station KFWE. She has one of those uncommonly rare soprano voices that broadcast well. For the past few months the audience of WBZ has been listening to a new voice, that of Aidan Redmond, left, conducting the programs of that station from the Hotel Brunswick studio. Although only twenty-two, the rich strength and refinement of his voice give an impression of older years.

KINGSTON

B BATTERY ELIMINATOR

DO AWAY with troublesome, expensive, bulky batteries, with acid, with stained carpets, with a dead radio just when you want it most. Install the KINGSTON B Battery Eliminator, and forget your battery troubles forever.

The Kingston Eliminator is compact, trim, handsomely finished in black and nickel, and guaranteed not only to remove the battery nuisance, but to deliver clearer tone and increased volume. A trial will convince you.

With the Kingston three different voltages are obtainable at the same time, each tap adjustable over a wide range making any desired voltage from 5 to 150 possible and harmonizing perfectly with your own set. The Raytheon tube is used as a rectifier. The Eliminator operates without noise or vibration and will not heat, contains no acid or solution, is no trouble to operate and the operation cost is so low as to be negligible. It will not get out of order.

Awarded the Silver Cup for superiority, in the New Inventions Division of the Third Chicago Radio Show

The ARMSTRONG Tone Reproducer

It is NOT a cone! It is NOT a horn! It IS a loud speaker! A MUSICAL INSTRUMENT

There isn't anything like it! Others may look like it—but none performs like it

Only 10 Inches High and 9 1/2 Inches From Front to Back

The Only Speaker Which Qualifies, Naturalizes and Intensifies the Tone

The ARMSTRONG misses nothing that's on the air. The most surprising thing about it is that you will forget you are "listening in" and will imagine that the singers and musicians are there in the flesh—right in your own home—so clear and natural is the tone. You will marvel not only because there are no barrel sounds, no hollow or metallic noises or distortions, but also because the ARMSTRONG brings to your ears the whole range of melody in perfect harmony, giving to each note its real tonal value.

The Range of Melody

From the delicate shading of the violin, the sweet notes of the flute, and the shrill piercing thrill of the piccolo to the deep rumbling bass of the organ,

and the lowest note of the bass viol; from the martial strains of the cornet, the sharp crack of the drum to the grand ensemble of the complete orchestra and band—the ARMSTRONG assures perfect radio reception and full clear, mellow tones and perfect harmony.

Beauty of the Voice

It has remained for the ARMSTRONG to overcome the difficulty of properly reproducing the Human Voice. It is the only loud speaker which actually qualifies and naturalizes the tones—and at the same time intensifies every note from the highest treble to the lowest bass.

This is accomplished by the use of a specially constructed tone chamber—"SHAPED LIKE A

SINGER'S MOUTH"—and a scientifically built sounding board, made of resilient spruce. These distinctive features are not found in any other loud speaker and they are fully protected and patented. They are the result of years of study and research. It is this special construction which makes the ARMSTRONG superior as well as different. It makes possible the perfect reproduction of the living voice with all its mellowness and harmony just as it comes from the mouth of the living singer.

The ARMSTRONG is more than a megaphone. It is distinctively a musical instrument which assures ample volume with perfect harmony and balance.

Jos. Calcaterra says: "I have heard a loud speaker that DOES deliver head phone quality audibly. It is the ARMSTRONG."

Your radio set cannot perform at its best without a perfect ground connection

The Ekko Ground Clamp solves this difficulty by insuring perfect contact at all times. It eliminates the high percentage of radio troubles due to imperfect ground contacts that prevent the free flow of current. It is provided with hardened steel points that bite through the paint, dirt, rust or corrosion that nearly always covers the pipe used for a ground. These steel points insure a free flow of current and full signal strength. The Ekko Ground Clamp can be attached to the nearest pipe. The ground wire is screwed to the clamp. Then a turn of the screw gives positive contact. Being non-corrosive the clamp maintains perfect contact permanently. It is neatly finished in white nickel.

At your dealer's **25c**

To Dealers: The Ekko Ground Clamp is supplied in lots of ten packed in the carton shown in cut. This carton forms an attractive counter display that helps you sell this most popular of all ground clamps.

The Ekko Company

Chicago, Ill.

So easy...
plug in
battery charging

Plug in the Tungar and your "A" or "B" battery is charging. Yes, it's as simple as that—with a Tungar.

An easy installation connects your Tungar permanently. Then you can conceal batteries in a cabinet, or down cellar—and just have a convenient switch to close when you sign off for the night.

In the morning your batteries are at their best, and you've only used about a dime's worth of current.

Tungar
REG. U.S. PAT. OFF.
BATTERY CHARGER

Tungar—a registered trademark—is found only on the genuine. Look for it on the name plate.

Tungar is the original bulb charger. It is a G-E product developed in the Research Laboratories of General Electric.

It charges 2, 4 and 6 volt "A" batteries, 24 to 96 volt "B" batteries, in series and auto batteries, too. No extra attachments needed.

It causes no radio interference.

It will not blow out Radiotrons.

Important

little gateways of reception

CONDENSERS are the entrances that make or mar a good performance. A good condenser stores up tone impulses, to be released at the instant they reach full-rounded perfection. An inaccurate condenser lets only a distorted part of the tone trickle through, and cuts down the receiving range of your set by putting it out of electrical balance. You'll realize the importance of accurate condensers the day you equip your set with Sangamo Mica Condensers. They will improve tone, range and volume.

Here's Work That is Almost ROMANCE!

Many EARN \$50. to \$250. a Week in RADIO

Get into the great new BIG-PAY Industry—Radio. If you're earning a penny less than \$50 a week, clip coupon now. Send for AMAZING FREE BOOK. The Heart of the Circuit

VICTOREEN Transformers and VICTOREEN Master Control Unit

Victoreen Manganin Rheostats
Zero temperature coefficient-resistance remains absolutely constant; double the number of turns of wire used on ordinary rheostats. Three terminals simplify wiring.
Five resistances—2, 6, 10, 20, 30 ohms, each..... **\$1.20**
Victoreen Potentiometers—200 and 400-ohm resistances, each..... **1.50**

R. F. Transformers
Made with air core construction. They are not merely "matched" but are actually tuned to a guaranteed precision of within 1/3 of 1%.
Victoreen Super sets are free from oscillations, howls or squeals—no matching of tubes is necessary.
The "B" Battery consumption is exceptionally low—8 to 10 milliamperes with potentiometer at negative side—less than some 3 tube sets.
Build a Victoreen Super and use these parts:
4 Victoreen No. 170 R. F. Transformers, each..... **\$7.00** (No. 171 Transformers when dry cells are used.)
1 Victoreen No. 150 Coupling Unit, each..... **\$5.50**
Should the use of aerial be preferred to loop, Victoreen No. 160 antenna coupler is required, each..... **\$3.50**

Victoreen Master Control Unit
A completely assembled, convenient, single control unit for use on circuits employing two or more condensers of the same capacity. Easy to mount—no change of wiring necessary.
Victoreen Master Control Unit Type VS..... **\$19.50**
Extra Condenser, each..... **4.50**
Get a complete list of parts from your dealer or write us direct.
Free Victoreen Folder and Hookup answers all questions about Victoreen circuit.

"All You Can Ask of a RADIO"

A Kit Built With a Longing for PERFECTION

Assembled, Forms Its Own Crackle-Finish Cast Aluminum Cabinet

HOW often have you wanted to build the most perfect set possible? What a real thrill it would be to put it together and then enjoy with others the very best quality in reception!

You know as well as anyone the way to go about it. You start with the best parts obtainable. You select, if possible, some radio engineer who is also striving for perfection, as your guide as to circuit and assembly. Then you go to it and get "laboratory results."

The Grimes Own Kit satisfies your longing for Perfection. There are no "nearly as good" parts. Every part is of the highest quality.

It is more! More than the most modern embodiment of Inverse Duplex, incorporating the latest improvements in the art. More than 100% shielded and equipped with the new "Greco" control. It is the first kit to form its own artistic crackle-finish cast aluminum cabinet!

Built to last a lifetime—complete including even the tools—no soldering—each wire already attached at one end! A few connections, a few screws to insert, and it's built. Built with its every phase as near perfect as the Grimes Laboratory knows how. Here is your privilege to "carry on"—to put it together—to strive shoulder-to-shoulder for PERFECTION.

Send for Grimes Own Working Plans

The coupon is handy. Tear it out. Pin a single dollar bill to it and mail it now. ACT—act for Perfection!

You be the judge of its value

Dealers who sell the Majestic "B" Current Supply are confident that it improves reception. So confident, they make you this unusual offer: Buy a Majestic today. Attach it to your set and use it for one week right in your own home. If, at the end of this time, you are not fully convinced that it gives you better radio performance—more dependable power at less cost—your money will be refunded!

Economical to Operate

You couldn't want a better proposition than this. The Majestic "B" Current supply, because of its unvarying constant voltage, gives you improved tone, greater volume—all at the low cost of about one-tenth cent an hour. So you can appreciate that here is a practical radio investment.

Your original purchase price will be returned through operating economy alone.

Majestic "B" Current Supply

delivers pure direct current—From your light socket

Give that set of yours the power it needs—power for any variation in tone. Then you'll have a new appreciation of radio. You will have one delightful program after another—summer evenings—winter evenings—ALL the time!

That's when your set is equipped with Majestic "B" Current Supply. Your set seems Alive with marvelous energy. You sense a new joy in radio.

You at last forget its mechanics, for a simple switch releases all the power you need for any program. Power—clean—constant—abundant! Power that instantly responds to high soprano, and as easily brings you the full resonance of an orchestration! Easily attached to your light socket saving you constant bother and attention.

No Filament to Burn Out
All the Majestic "B" Current Supply units are manufactured complete in our factory and are equipped with the famous Ruytheon Tube. (Endorsed by numerous radio engineers and editors) which is a non-filament tube with full wave rectification, no acids or back surge. Tests of the Majestic "B" on the oscillograph demonstrate that all A-C hum is eliminated.

Majestic Standard-B
Especially adapted for sets having not more than seven 201-A tubes, or six 201-A tubes plus one 135-150 volt power tube. Popularly priced for the average set. Improves tone—better reception.
Price \$32.50
West of Rocky Mts. . . . \$35.00

Majestic Super-B
Capacity 1 to 12 tubes, including the use of 135-150 volt power tubes. Complete with switch to control current from light socket.
Price \$35.00
West of Rocky Mts. . . . \$37.50

Majestic Master-B
Rating 60 mils at 150 volts. Particularly adapted for Radiola 25, 28 and 30 and Super heterodynes. Will operate all power tubes, also the new super-power tube UX-171 (180 volts). Unequaled for sets having a very heavy current draw.
Price \$42.50
West of Rocky Mts. . . . \$45.00

The CHELSEA Truphonic Six

Easily one of the real sensations of the year, the Chelsea Truphonic Six must be seen and heard to be appreciated. Built by one of the oldest radio manufacturers, noted the world over for its reliable products, this Chelsea receiver incorporates the new truphonic circuit, called the greatest radio contribution of the season. The circuit is fully shielded. Since a power tube may be used in the last stage, tremendous amplification and a tone stability wholly new is now obtained.

New Karas Equamatic Five Tube Sensation Now Being Featured By Radio Broadcast

FULFILLS in an extremely simple manner a very desirable and HIGHLY IMPORTANT FUNCTION that our foremost radio engineers have been striving to accomplish ever since the advent of radio broadcasting. THE EQUAMATIC SYSTEM AUTOMATICALLY provides a CONTINUOUS MAXIMUM

and an absolutely EQUAL TRANSFER OF ENERGY between primary and secondary inductances at all wave lengths by a coupling system unique to radio engineering practice—it also ELIMINATES the overlapping of electro-static and electro-magnetic fields with their harmful, boadenng and distorting effects.

Pure Tone—Great Volume

The result of the EQUAMATIC SYSTEM from five tubes is a clean, clear, pure and powerful signal—equal in VOLUME to the usual six and seven tube sets—sharpness and SELECTIVITY equal to the superheterodyne—SENSITIVITY equal to a regenerative circuit—and a PURITY of tone equal to a crystal detector. In the EQUAMATIC SYSTEM the primary coils are attached to the shafts of the condensers—and are adjustable in their relation to both the condenser shafts and the secondary coils. The primaries are also ENTIRELY SEPARATED from the secondaries. The secondaries are adjustable

to any angle in relation to the primaries and also as to their degree of coupling with the primaries. The primaries are AUTOMATICALLY, constantly and CONTINUOUSLY varied—at a definite, everchanging rate of variation—with the turning of the condenser dials. This POSITIVE, AUTOMATIC action provides the ABSOLUTELY EXACT amount to coupling —at every wave length setting—necessary to deliver to the secondary coils EXACTLY the amount of energy required to cause the tubes to constantly operate at their HIGHEST EFFICIENCY.

Easy to Build

A manual of complete diagrams and instructions for building this five tube KARAS EQUAMATIC receiver in complete detail is included with each set of KARAS EQUAMATIC coils. (This manual will be sent separately upon receipt of 10c to anyone interested.)

Order Through Dealer or Direct on This Coupon The Karas apparatus essential to the construction of the five tube EQUAMATIC receiver is carried by nearly every good radio parts dealer in most cities. Secure the parts from your dealer. If he is out of them order direct from us using this coupon. Send no money. Just hand the postman the purchase price plus a few cents postage.

MEET US AT THE
RADIO SHOW

DEALERS—We have a very attractive proposition to offer you.

LANE MFG. CO.
 2941 W. Lake St.
CHICAGO

Counterphase Eight

A year ago at the various Radio Shows, interested spectators looked askance at the Counterphase Six—"I doubt if you can beat the Nameless," they said. But we did!

COUNTERPHASE EIGHT

Now we offer the Counterphase Eight and we say—"It's the most selective receiver we ever built, has greater range and power and it is easier to operate." Just see it—hear it—that's all we ask. Special circulars sent on request.

IMPROVE! Your Radio Reception by Using The REDI-MAST FOR AERIALS

A strong hand-turned rock maple pole which gives a quick, convenient method of erecting a dependable antenna. 5 or 8 foot lengths, will fit any roof—single or multiple wire antennas. Will carry the heaviest sleet covered antenna in strong wind without weakening. Neat in appearance. Can be set up or dismantled without danger of causing leaks in roof. Complete set includes three steel guy rods 3/4 inch in diameter, adjustable pulley, web irons, roof sockets, anchor pins and full instructions. Price 5-foot mast, each \$3.50; 8-foot mast, each \$4.25. Ask your dealer.

WAVE-X

The WAVE-X Condensing Antenna is an aerial that can be quickly erected on wall, chimney or roof, anywhere five foot square is available. Several on one roof without interference. Provides sharper tuning, increases selectivity and is non-directional. Twelve durable highly conductive, non-corrosive aluminum wire feelers reach out in all directions. Perfectly insulated to prevent losses. Only one upright to erect, only a hammer and a screwdriver needed. No. 2, with 8-ft. pole ready to install with all accessories and full instructions, \$12.50. No. 3, for side wall or chimney mounting, \$12.50.

Thursday, September 30

Headliners Today

Table with 5 columns: Atlantic, Eastern, Central, Mountain, Pacific. Lists radio stations and their programs for the day.

For stations silent tonight refer to first Thursday's list.

Atlantic or Eastern Daylight Saving Time Stations

WCAU, Philadelphia, Pa. (277.6m-1080kc), 6:30 p. m., Cathy Garden orchestra; 7:30, Snellenburg Symphonic orchestra; 8, Saddler's Plantation serenaders; 8:30, recital; 8:45, Gets Go-Getters; 9, Carolyn Thomas, soprano; 9:30, Musical Chets; 9:45, Professor Doolittle; 10, The Hood Boys.

Eastern Standard or Central Daylight Saving Time Stations

KYW, Chicago, Ill. (535.4m-560kc), 8 p. m., family hour; 9:20, Congress hotel; 10:11:30, classical concert, staff artists; 11:30-1, opening and answering the mail, Eddie and Fannie Cavanaugh.

TURN Extra Minutes! into Extra DOLLARS!

Sell! Make extra money, easily. You may be a splendid salesman or saleswoman. Find out. Develop hidden talents; make your odd moments yield a large, steady income.

organ; Katz and his Kittens' orchestra; Midway Garden orchestra; Tearney's Town club orchestra; Capitol theater program.

Central Standard Time Stations

KFNF, Shenandoah, Ia. (461.3m-650kc), mixed program. KPRC, Houston, Tex. (296.9m-1010kc), 7:30 p. m., Blanchard's dance orchestra.

Pacific Standard Time Stations

KFI, Los Angeles, Calif. (467m-642kc), 7-8 p. m., Radio Boys' orchestra, George O'Hara and his uke; 8-9, KFI drama hour, short playlet by screen artist cast; 9-10, hour of Hawaiian music, Charles Dimond steel guitar; 10-11, varied program.

Organize Radio Man Hunt

LONDON.—A radio man, or voice, hunt is a novelty recently introduced on British programs. The hunted man participates in the programs at all sorts of places, and at all sorts of times.

Tune by Wave Lengths

BRING IN STATIONS YOU NEVER HAD BEFORE. RADEX Tuning Charts. Show wave length you are tuning to. Tell where to set dials for any station.

"Smile and the World Smiles With You, Wear a Frown and You Will Be Lonesome." IF YOU WANT A HUNDRED SMILES, READ "HOWDY JUDGE" Just Off the Press.

SUBANTENNA

Sensational Underground Antenna KILLS STATIC Eliminates all Interference. Makes Any Radio Set Better Revolutionizes Radio. Write us and find out why. CLOVERLEAF MANUFACTURING CO. 2714-A So. Canal St. CHICAGO

"GOODY GOODY GIRL"

(Continued from page 18) She smiled reassuringly. "No; no one knew where I was bound. Grace Hughes herself doesn't expect me. So you're not to worry a moment longer. When we get to the first stop in Illinois, I'll get off, take a train back and—I suppose a little less than sixty dollars will see me through."

"You're a thoroughbred," he exclaimed fervently. "Most girls would have been in a state of hysterics, if not complete collapse, by now and you haven't even turned a hair."

SHE SHRUGGED dainty shoulders deprecatingly. "I can take care of myself, so why get upset?" "That's right," he agreed, "but I do think you should know that our first stop on the other side of the state line—I questioned the porter pretty closely—will be sometime after midnight, at a lonely little flag-station of a place—"

"I'll not be afraid." "But I'll be afraid for you. You're entirely too pretty a girl, too tempting by far—"

Yale GROUND HOG DOUBLES POWER AND DISTANCE. Marvelous newly-invented ground gives 100% improved reception. Doubles power and distance. Stops leakage. Reduces static. Stops jangling even in midsummer. Results never before equaled, users say. Satisfaction guaranteed.

22 1/2 Volt un-acid everlasting rechargeable "B" STORAGE BATTERY \$2.95. Includes Chemical. 45 volts, \$5.25; 90 volts, \$10.00; 112 1/2 volts, \$12.50; 135 volts, \$14.75; 157 1/2 volts, \$16.80.

"B" BATTERY ELIMINATOR Only \$7.95. MONEY-BACK GUARANTEE. Stop being a slave to the "B" Battery nuisance! Throw the old-fashioned cells in the ash can! Hook up a new Roll-O "B" Battery Eliminator in 30 seconds and forget battery troubles forever.

"Hush!" She rose to her feet, alarmed by his vehemence. "I won't hush." He, too, got up and she backed away when he made as if to take her into his arms. "I love you. Every minute I see you I get more and more in love with you. You shan't get off this train alone and in the middle of the night. You're coming on to Chicago with me."

"To Chicago? Are you mad? I couldn't think of it." "Yes, I'm mad. Mad about you and—" He broke off sharply and whirled away from her. Someone was rapping peremptorily upon the drawing-room door.

Lois! Lois! What is to become of you? The silken threads of the city spiders are beginning to wind about you. You do not know. But soon you will suspect and then what will you do, friendless and not knowing whom to trust? We are going to watch and hope for you as your story unfolds in succeeding issues of Radio Digest.

FREE RAILROAD FARE LEARN ELECTRICITY In the Great Shops of COYNE. Earn \$60 to \$200 a Week. Get in the field that offers you the BIG PAY—BE AN ELECTRICAL EXPERT. Coyne is not a Correspondence School. Everything is practical. No books or useless theory.

Excellent Reception With The THOMAS LOOP. The THOMAS LOOP combines the three qualities wanted by every radio owner; excellent reception in a beautiful design at a moderate price. This loop is a highly satisfactory receiver on any five-tube or super-heterodyne circuit using .0005 condensation. It is guaranteed as to workmanship and a THOMAS LOOP answers the loop question for all time.

AT KYW AIR CARNIVAL

(Continued from page 5)

menced kicking WTAS off his Purple Grackle antenna he got Eddie to man the mike with his announcing and Fannie skidded the ivories as staff pianist. They worked up a big audience for their own parts. Now we have them regular for this carnival feature and they certainly are getting the postman's goat.

"Art Linick is announcer for us. Art is 'der Dutchman vot somedimes gedds der vires of der vireless all twisted togedder mitt vrom eggzidemondt behind der migrofone."

"His 'Bed Time Stories' are in the same class with the 'Bad Time Stories' of the Western station except that he uses the Jewish dialect. His 'kiddies' wear high heel slippers and short bobs."

Just before this symposium was compiled for the composing room Mr. Mattson brought over a picture of Earl Meeker in the clown costume. He had not been on the air yet in Chicago but he was announced as an "exclusive KYW artist" who probably would be another scintillation of this riotous hour, although Mr. Meeker has a wider fame as a baritone of the opera.

"But he is a wonder, very versatile," said Mr. Mattson. "He comes East after a distinguished record at KFI and KHJ in Los Angeles. He also was director of the Temple Baptist Church choir of one hundred voices at Los Angeles."

Another regular singer on the KYW carnival program is Miss Grace Wilson. Her personal beauty and feminine charm would possibly surprise many a carnival listener because her voice often is mistaken for

that of a man and she sings the regular tenor parts with perfect ease and technique.

Each week finds the carnival audience spreading in wider circles. The applause cards of listeners in the country and smaller towns seem especially appreciative. To them it is a vivid introduction to the gaiety and rollicking life of the big city. It is their theater, their dance, their big day at the "carnival fair."

New WPG Transmitter First Of Improved 5,000-Watters

ATLANTIC CITY, N. J.—The new 5,000-watt superstation of the "World's Play Ground," Station WPG here, is new in every sense of the word. It embodies a new circuit and all the latest improvements made on the basis of experiments of the past three years by Western Electric engineers.

This set, first of a new type, has a master oscillator and frequency stabilizer. Carrier wave distortion is cut out entirely, it is claimed.

300-Foot WJZ Towers Are Guide for Air Mail Flyers

NEW YORK.—The three hundred foot antenna towers of Station WJZ's transmission plant at Bound Brook are doubly useful. In addition to supporting the six-wire "T" type cage antenna used in broadcasting from this station, they also serve as towers of light to guide the United States air mail flyers to their landing field which is only a few miles distant from the transmitter.

RADIO SET DON'T WORK

(Continued from page 9)

call where a service man is required to visit the house. The cost of new tubes, batteries or set parts is additional. We have found this plan to be very satisfactory."

"Summing up your experiences as a professional 'trouble shooter' what would you have to say concerning the general public?" I asked the service manager.

"It is divided into three classes. The first comprises that group of people who don't know, know they don't know and don't want to know, but yet are willing to pay for service. I should say 20 per cent of the set owners fall in this classification.

"The second group is the boring majority. It embraces about 60 per cent of the listeners. We call it the 'reader' class, because these persons usually 'fix' their own sets and ruin them, then call for service, and close the deal by blaming the service men or their receivers. It is because of this group that we must school our service men in keeping cool and never losing their tempers.

BATTERIES \$798

6 V. 100 Amp. One piece, solid rubber cases. GUARANTEED 2 YEARS. 2% Discount Cash With Order. Special discounts to dealers buying in large quantities. **MOGUL ELEC. LABS.** 1214 S. Peoria St. Chicago, Ill.

PATENT ATTORNEYS

PATENT ATTORNEYS PATENTS. Booklet free. Highest references. Best results. **WATSON E. COLEMAN, Patent Lawyer**, 644 G Street, Washington, D. C.

"The third class, embracing the remaining 20 per cent, contains those people who know or practically know what they are doing, but when they get stuck, they send for the service man, listen to him intelligently, and willingly pay for the lesson."

I closed my notebook and addressed the service manager.

"I think my readers will get something worth while from your interview," I said. "I hope the article makes it a little easier on the downtrodden service man, and stops many of the foolish calls."

So I conclude by saying, don't be insulted, but take this information to heart for what it is worth. It is just a lot of common sense every listener should have.

CONE UNIT

Radiohone Broadcasting Stations

Corrected Every Issue—Part IV—Sept. 15, 1926

ONE DOLLAR will be paid to the Radio fan reader of Radio Digest submitting the most errors in any one station's listing in the Directory of Radiophone Stations, which appears in six parts, serially continuously on the next to last page. Letters must reach Radio Digest's office not later than one week from date of issue corrected. Readers are not limited to correcting one station, but such corrections must be verified by the stations themselves, and NOT by comparison to other so-called accurate Radio directories or lists. Verifications must accompany corrections. Turn in corrections for as many stations as you can find—if you can find errors! Use separate sheet of paper for each station submitted and place name and address on each sheet. In case of tie, duplicate awards will be made. Until wave lengths become stable again, we will not be able to count these in the challenge.

United States (Cont'd)

NOTE—The fourth part of the schedule list appears below. Part five appears next issue.

WMAQ, Chicago, Ill. 447.5m-670kc. 1,000 watts. The Chicago Daily News. Announcer, Robert Whitney. Daily ex Sun, 11-12 n. WQJ program; 12-1:45 pm, 2:45-7, 8-8, 10. Central daylight.
