KOLSTER RADIO

*is the result of eighteen years of
Radio Research
by
Frederick A. Kolster*

The genius of the man who invented the radio compass is an integral part of the radio receiver which bears his name. No wonder the most discriminating buyers find this set their ultimate and only choice.

Prohibition

Some old-timer said, "every man has his price," and it seems as though the Eighteenth Amendment is bearing out this heretofore doubtful contention. Bribery, vicious gun-play and hi-jacking are flourishing as never before. All of us may yet know the Illinois sensation of hearing liquor gang machine-gun bullets whistle past our ears.

Many men are apparently not sufficiently strong morally to resist the temptation of easy money, so they become involved in the liquor traffic. These rum runners and dealers get so little opposition from the law that they have to fight among themselves to get real action.

What a pity that our government, one of the greatest powers on Earth, has to bungle this domestic job, and not only embarrass our municipal officials with Prohibition-created gangs of deadly cut-throats, but make an integral part of our sacred constitution an object of foreign witticisms. An aggressive enforcement policy on the part of our government and Prohibition administrators would squelch these noisy and criminal violators and win the wholehearted backing of more than half of the American people, whose support so far is based primarily on their conviction that the Eighteenth Amendment shall never be repealed.

Foolish Opposition

Big-hearted Uncle Sam! Powerful enough in resources to launch the world's mightiest navy and to maintain the most formidable military force ever known, is still awaiting the pleasure of France and Italy to enter upon

a civilized agreement looking to disarmament and continued peace.

France, frantic with an overwhelming fear is bristling her frontiers with cannon, hastily building a tremendous navy, perfecting gases and explosives that she hopes can litter half a nation with dead adversaries, drilling a comparatively enormous army and passing such drastic peacetime conscription laws as would make us Americans turn Bolsheviks. Still she can't pay her honest debts, increase her educational facilities, exchange the wooden ploughs of her farmers for modern agricultural machinery nor improve her pitiful economic condition. To accept our invitation she would show good sportsmanship in trying to keep war away from a much troubled world and at the same time would inexpensively insure her own safety through the friendship of Great Britain and the United States. But she seems intent on bleeding herself white then violently committing suicide.

Italy, a new and revived country, is based on the firm and recreating direction of Mussolini. His work has been admirable, but now that the period of necessary blustering and strutting around is past, Il Duce has disappointed the progressive world by saying "no" to Mr. Coolidge's peace conference proposal. Arming to the teeth, hurling threats and accusations around southern Europe, Italy has turned onto the path that leads to trouble and destruction. But this danger is softened by the suspicion that Mussolini is rumbling and growling for impressive effect. If he'd only glance through a history he'd see that the chances for the Italy of his dreams would be possible only through peace, not war.

At Last!

An Amplifier which gives uniform amplification from the lowest audible note to the highest!

An Amplifier which preserves the individuality of every musical note and instrument!

A Weekly Review of Radio News, Thought and Opinion

R. C. A. LICENSES MANUFACTURERS

Coincidental with the formation of the Federal Radio Commission, action on the part of the Radio Corporation of America in licensing independent manufacturers to use their hundred or more basic patents in the manufacture of radio sets and equipment, brings to the public further assurance that the radio industry has at last entered a definite period of stabilization.

The Zenith Radio Corporation and the All-American Radio Corporation, both of Chicago, and the Radio Receptor Company of New York, are three concerns which now operate under the RCA license and have the use of that company's patents.

INDIVIDUAL TRYOUTS SUPERCEDE PLAN SOLUTION

It is becoming more and more evident that the Federal Radio Commission will not attempt to solve the national radio "jigsaw puzzle," as one commissioner put it, by the application of any particular general solution plan that has been offered, however worthy it may be. This does not mean that worth while portions of this or that plan may not be adopted, but it does mean that the present broadcasting system, bad as it admittedly is, is not to be suddenly disrupted and a different set of air traffic rules substituted.

Rather then, instead of installing an entirely new system of re-allocating stations and suddenly throwing all on dif-

ferent wave lengths, which would play the very mischief with listeners present-day logs and make it next to impossible to find a station, it is the commission's idea after they have gotten a perspective on the whole picture, to take up the cases of the individual stations one by one.

And then, as we have so plainly seen during the past week, the process will be simply this. First, a station gets its temporary permit, so as to operate after April 24th without violating the law. These temporary permits, by the way, may run along indefinitely, good, in fact, until the applicant's case is reached. Then comes the applicant's opportunity to be heard by the commission, which hearings are always to be public.

Following this will be the granting of a short-license of say 60 to 90 days, and then possibly the granting of the stipulated three-year license. However, it is unlikely the long term licenses will be generally granted for sometime to come. The commission wants to be dead sure that the system will work in its entirety before it jeopardizes the whole or any part of the set-up by giving any station a three-year license.

ODD

Radio Fan—"I picked up WGY last night."

Auto Fan—"Huh, wouldn't she give you her full name!"—Science and Invention.

The World's Long Distance Championship

Won by Mr. R. Davies

USING

CeCo TUBES

READ HIS LETTER!

Dec. 20, 1926.

C. E. Manufacturing Co.,
Providence, R. I.

Gentlemen:

"MY SUCCESS in winning the WORLD'S RADIO LOVING CUP in recognition of the longest vocal radio reception on record was MADE POSSIBLE BY YOUR TUBES. With my hook-up I was successful in tuning in 21 foreign stations in 7½ hours during International Test Week. It was impossible to receive even distant U. S. reception with various tubes of different manufacture at the time of test.

"Whereas, in my test for the World's Championship I received the following stations and tuned some of these in three or four times during test week, and I might add that weather conditions were very poor.

"SYDNEY, AUSTRALIA (AIR LINE 9700); MOSCOW, SOVIET REPUBLIC; BRUSSELS, BELGIUM; ROME, ITALY; MUNICH, GERMANY; HAMBURG, GERMANY; MADRID, SPAIN; LIMA, PERU; LIVERPOOL, ENGLAND; BOURNEMOUTH, ENGLAND; LONDON, ENGLAND; ABERDEEN, SCOTLAND; VANCOUVER, B. C.

"It is readily understood why I have become so enthusiastic over your product, for without it my success, which has meant so much to me, would have been a very difficult task. A manufacturer turning out so meritorious a product is deserving of all the 'boost' the radio industry can give, for your CeCo tubes really fulfill your motto, 'MAKE A GOOD RECEIVER BETTER.'"

(Signed) R. DAVIES

In your own interest Demand CeCo Tubes. Endorsed and specified by the leading Radio authorities in the United States.

If your dealer has not got them he can get them for you through authorized local jobbers.

Dealers, get your franchise on the finest Radio line now on the market.

What Price Quality?

By K. G. ORMISTON

When the organist puts his foot on his most low-down pedal the result is a musical note of a frequency of 16 cycles per second.

When the pianist tinkles the last ivory at the right end of the keyboard the result is a musical note of a frequency of about 4000 cycles per second.

Between and between are noises of every frequency with assorted harmonics and overtones mixed with the fundamentals. Radio engineers who have designed our broadcast stations have done their level best to do full justice to all that wide range of frequencies from the rumble of the lowest organ note to the squeak of the highest soprano songbird. They have endeavored to amplify uniformly and regardless of frequency and pump a fairly accurate reproduction into the ether.

The job at the transmitting end is not perfect, but it is so far ahead of the capabilities of the modern receiving set that in our search for quality we may concentrate our efforts on the receiver until we are at least able to reproduce **everything** that is broadcast.

In the receiving set the radio frequency amplifier and detector circuits also have their shortcomings and do queer things to the original frequencies, but here, too, we may overlook their failings because there is an offender who does far more damage. In fact, for all practical purposes we may consider that the output of the detector tube is nearly a perfect reproduction of what is going on in the broadcast studio. Headphones connected to the detector give a very satisfying result. We must, therefore, in our search for quality, scrutinize with a critical eye the divers and sundry apparatus that follow the detector,—namely, one audio amplifier unit and one loud-speaker. Here is where all the

havoc is wrought—music goes in so sweet and comes out so sour!

So let us consider the various types of audio amplification from the standpoint of true reproduction and see what's what. We must of necessity become a bit technical, but we will try to stick to United States, rather than English or Greek.

The vacuum tube is, of course, the heart of the amplifier. And fortunately, the tube in itself when operating under the proper conditions, will amplify uniformly and without distortion. You will observe the qualifying phrase "under proper conditions." That means the tube must operate on the straight-line portion of its characteristic curve, which in turn means that there must exist a certain definite relation between grid and plate potentials; or in still more simple language—the B and C voltages must be just right. Now, with two or more tubes with proper B and C potentials we have an ideal amplifier, BUT—here is the little joker,—we must couple these tubes together and therein lies the difficulty.

The most widely used method is through the use of transformers. The primary winding of the transformer is connected in the plate of one tube, and the secondary in the grid circuit of the next tube. This affords coupling without disturbing the very essential plate and grid potentials. But no transformer yet built will amplify uniformly over the entire audio band. There are many reasons for this. One of these is that the impedance of the windings varies with the frequency. Another is that the distributed capacity of the windings offers a path to the high frequencies and thereby reduces the amplification of those frequencies. A third is that the combined distributed capacity and the

(Continued on Page 74)

The Musician's Point of View

By FRANCES HEWITT
Musical and Studio Director of KFWO

KFWO is unlike every other broadcasting station in that it nestles close to Mother Earth, hugged by a flower garden, guarded by high-tossed mountains on a beauty bedecked island, a sun-gilded jewel set in an azure sea. But it is like every other station in that

FRANCES HEWITT

it has a host of friends,—generous with their praise; kindly in their constructive criticism; with a correspondence that is voluminous in expressions of appreciation.

This is all as it should be, for no one outside a broadcasting station can fully realize the heartbreaking work, the hair-raising possibilities of costly accidents to apparatus that is entailed in its maintenance, to say nothing of hosts of other troubles and worries.

Surely, as Studio Manager of such a station, I should be contented and

happy? But I am not! I am jealous—horribly, frightfully jealous—for the musicians, not only of our own station but for those of all other stations, and, until I stopped reading that which critics have to say anent the broadcasting performer, in our numerous publications, I was in a constant state of indignation at their seeming lack of comprehension of what said performer is up against!

Oh, how they hate and anathematize sopranos! And, I am a soprano, well and alack!

Then they take so many digs at announcers! Oh, ye gods! How many of these facile writers, I wonder, could talk, hour after hour, day after day, to an unseen audience, keeping up their gaiety, their good cheer, their friendly tone of voice!

If radio has made the broadcast announcer, the latter has surely done his share towards making their respective stations popular, and to these announcers, who hold their listening public through the sheer force of their personality, all the honor is due that is given to any great artist!

For they are artists in their particular line. But it is not for them I would speak now. They are few in number, as are the real artists in any walk of life, and the public loves them, never ceasing in its praise of them and their work. This is right! For all gifts are of God, and, in praising His gifted ones, we but praise Him Who gave them to us.

I am jealous for the musician—especially the singer; particularly, the soprano!

Musicians and singers have been in the world since the beginning of man. They have contributed more in joy and

entertainment, rest and relaxation for the tired worker, the sorrowing brother and sister, than has any other class of humanity. The musician has lived hundreds of thousands of years without radio. But radio can not live as broadcast stations without musicians. In spite of the wonder of your favorite announcer, and the joy you take in him, were it not for the musician, this radio affair would be a sorry and gloomy business!

Oh, yes, I know what nerve-racking sounds reach you via your receiving sets from these same musicians,—especially from singers! But I know something you do not know! I know somewhat of how much of this excruciating clatter is due to the performer, and what portion is due to the transmission apparatus—and its operator!

Were you to hear many to whom you now listen—and condemn—over radio, in a theatre or recital hall, you would

laud them to the skies because of the pleasure they gave you; others, whom you like—over radio—you would hiss off the stage! For radio apparatus, at its present stage of development, ranks with, and works like, the undeveloped human machine—it lowers the good and exalts the mediocre and bad!

Mechanics and artists have met in this field of radio closer than they have ever met before. As is always the case, when these two meet, mechanics win—for a time. But, in the end, people demand the beauty of art in their mechanical appliances, and art takes its rightful seat,—not necessarily a dominating one, but at least an equally beloved and honored one.

So far, the engineers of radio, in their efforts to do the best for their apparatus, have been doing their worst to the musician.

The soul of a musician is of the sub-

These Single dial Control *Stewart-Warner* Receivers offer genuine radio Value!

Stewart-Warner single dial control receivers have a six-tube receiving circuit of acknowledged efficiency. . . they have a reputation for tone qualities that is conceded even by manufacturers of competitive products. The Stewart-Warner radio line, in its entirety, is made in Stewart-Warner factories. . . in this way the performance of each unit entering into the completed product can be matched with the others. The resulting product, under the trade name of Stewart-Warner Matched Unit Radio, is offered to you with the assurance that you will find it to be, in every way, a satisfactory investment.

Any Stewart-Warner dealer listed in this advertisement will gladly demonstrate Stewart-Warner radio in your own home and explain the liberal terms on which it can be bought.

Picked Out of the Air

By HEARL LA VERN CROWTHERS

A rut is a grave with both ends knocked out.

After all a blotter will only take up the ink which has not already soaked into the paper.

A blow between the eyes may close the eyes, yet open them to something else.

The mental photograph of you upon the mind of another should need no re-touching.

A man may have been born on top of a mountain, yet still elevate himself.

You do not always forget an injury but you can refuse to think about it.

Lines in the face of an individual are not always indicative of years.

The man who drives at ten miles an hour in the center of the street is probably ahead of his mind at that.

The largest river has the greatest number of tributaries and they all drain into it. It must also lie in the bed which it itself makes.

Time does heal all wounds, one way or another, but the resultant scar tissue has an aggravating way of pinching the old nerve endings—just to remind us.

I have my moments of depression when I really wonder whether or not we were not given two ears in order that some of the things we hear may just go in one and out the other.

An Aid to Selectivity

A small new Station Selector just marketed by the Central Radio Laboratories, is of special interest to radio fans in these days of much radio interference, because it can be quickly attached to any set using an antenna and is claimed to aid greatly in separating stations on the shorter wave lengths. The fact that it requires no adjustment is another advantage appreciated by those owners who find they have enough dials to manipulate on their set as it is.

The unit is made up with a special type coil enclosed with switch in a small black finished case. It is simply connected to the antenna lead-in and the set. It acts to boost the resonance tuning frequency of the antenna circuit above broadcast frequencies, thus increasing the selectivity of the set at the shorter wave lengths, where there is greatest station congestion, in preference to the longer wave lengths where station selection is not so troublesome. Of course the unit will not separate stations on the same wave length, nor those stations so close as to set up the heterodyne whistle we hear all too frequently nowadays, because such separation is impossible with any practical device known to radio engineers.

Blue Vitriol Ground

THE TROUBLE SHOOTER

ASK K.G.O.
The Answer Man

KENNETH G. ORMISTON
Technical Editor

J. S. Hussey, Cromberg, Calif., writes that he has an E. I. S. 7-tube superheterodyne with which he gets lots of DX and interference. His tuning condensers are of the old style, being three years old. He asks if straight-line frequency condensers will improve his selectivity. His present condensers are shunted by Chelton midgets.

It will help your tuning considerably to replace your present condensers. Straight-line frequency condensers, however, while they will space out the stations on the lower end of the scale, will bunch up those on the upper portion of the scale. The ideal condenser is one whose plates are so shaped as to follow straight-line frequency characteristics over the first half of the scale and straight-line wave-length on the upper half of the scale. To illustrate this: KFON and KFWB are 100 kilocycles apart, and 19 meters. While on the upper scale KHJ and KFI are also exactly 100 kilocycles apart, but here this separation represents 62 meters. It can be seen, therefore, that a station separation on the dials in proportion to frequency over the lower half of the dial, and a separation in proportion to wave-length over the upper half is the most advantageous arrangement. Continue to use the midgets as they serve as vernier adjustments.

New RCA High Mu Tube

The Radio Corporation now offers their UX-240 tube, especially intended for resistance coupled amplifiers. Inasmuch as in this type of amplifier there is no step-up effect excepting that of the tube itself, it is desirable to use a tube with a high amplification constant in order that a stage of this type may be the equivalent of a transformer coupled stage where the turn ratio of the transformer gives a voltage increase.

The tube accordingly has an amplification constant of 30. It is stated that a two-stage resistance coupled amplifier using the 240 type tubes will operate a loud speaker at full volume. Heretofore it has been necessary to use three stages to equal the volume of a two-stage transformer-coupled amplifier.

Anent Selectivity

Readers continue to complain of the lack of selectivity on the stations on the lower half of the broadcast band, and do not realize that their own receiver is largely responsible, due to the characteristics of the antenna circuit.

In the usual layout the antenna comes to a coil within the set and then out to ground. This circuit contains all the essentials of a tuned circuit,—namely, inductance and capacity. And whether you like it or not, your antenna circuit is nicely tuned to some particular wave-length. With the usual small antenna and small coupling coil in your set, this wave-length is short, right down among the flock of stations between 200 and 300 meters. That is why one or more of the short-wave stations seems to blah all over the lower end of your dials, and selectivity is a doubtful item. What to do? Well, the easiest way to rectify the trouble is to tune the antenna circuit purposely where you want it. Since it would hardly be advisable to add another control to the bunch you already have, the desired result can be accomplished by inserting a fixed inductance in the antenna lead which will raise the wave-length above the broadcast band. This may broaden out the fellers at the top of the scale, but the inductance can be shorted out again when you want selectivity up there. The Central Radio Laboratories are marketing a small unit for this purpose.

Preston Ground Name Changed

Several imitations of the radio ground connection invented and developed by C. H. Preston of Chatsworth, Calif., are being offered to the public. This article, a positive ground connection the merit of which has been attested by many well known radio engineers, was first marketed under the name of the Preston "DX" Radio Ground, but almost immediately there were placed on the market "X" Grounds, "OK" Grounds and numerous others, assembled in a hurry by an unscrupulous lot of people whose sole desire was to "get in on the easy money" regardless of the feelings of the radio owner whose money they were taking. No manufacturer with fair business standards wishes to discourage fair competition, but unfair competition sometimes makes it necessary to adopt combative measures. Preston has been forced by circumstances to discard a name that has been popularized by the expenditure of many hundreds of dollars of advertising money, and change the name of his ground to the "C. H. Preston Permanent Radio Ground." He has also adopted a trademark and label that contain his signature. The guarantee of permanency of the product over his signature as inventor will, it is believed, offer some assurance to the radio buying public that they can buy the genuine produce with the assurance that it is correct.

"Modern" Tube Shield

A new device for shielding tubes has recently been placed on the market by "Modern" Laboratories, Owosso, Michigan. These shields protect the tubes from microphonic sound waves by insulating them from the surrounding air and by three rubber tipped spring fingers inside of shield, which press tightly against the tube, arresting any vibrations set up by jars, sound waves or telephonic vibrations in the cabinet; the rubber tips eliminate any possible conductive leakage from shield to tube. B. Kruger & Co., 500 North Huntley Drive, West Hollywood, is the representative for the "Modern" Laboratories.

WEBSTER B and C Socket Power

Raytheon Equipped
5 Controls

Easily set to exact current value needed for every tube in receiver to get best tone, greatest distance and most volume. Gets amazing results out of H.F.L. 11 (8 standard, 2 No. 112 and 1 No. 171 tubes) and other high power sets.

Before buying an eliminator write for FREE booklet, "Improving Your Radio."

By CAREY PRESTON RITTMEISTER

"C. P. R."

Women all over the world and in every walk of life are awakening to the realization that more thought and study must be given to the cultivation of better health. Olga Nether-sole, the English actress, has been decorated by the British government for her pioneer health work, culminating nine years ago in the formation of the People's League of Health; and her efforts have resulted in the framing of definite legislation to promote the national health.

There is no doubt that happiness and success depend largely upon one's health, and by following a few simple rules and using a little common sense, most girls can be healthy and happy.

Headaches, fatigue, chronic indigestion! How common these things are among women, young as well as middle-aged and old! Remedies are sought; one cannot eat this and that; but very seldom does one dig for the real cause of these discomforts. Information on calories, vitamins and balanced feeding is being spread throughout the length and breadth of our country by the women's clubs, by Government bulletins and by the radio. A woman running a household will doubtless have at least one simple reference book on food values. But how few will have any information on psychology.

The modern woman should read and study one or two of the simplest modern textbooks on psychology. She will then begin to see how the daily happenings of life affect the health, through

the subconscious, making them the ruling moods and bodily tendencies, such as chronic indigestion and melancholy in the pessimist, or good appetite and health in the optimist. She will then begin to understand how the law of suggestion broadens out until it includes the entire structure of life.

Success in Business

One of the most celebrated women in the field of big business is widely known as a successful importer. She has worked her way to the top so what she says is worth knowing. She started in business with a capital of \$38, and her yearly income now is written in six figures. From her experiences one deduces the conclusion that business is difficult; that a woman going seriously into business must forget the feminine side; must try to see things as a man sees them; must ignore physical conditions.

Most of all, it takes courage—and then more courage. Then, too, it takes honesty—not only of action but of every little thought. You must expect to get a square deal and always give a square deal. Most of all, imagination enters into the structure of success.

Many a woman has the imagination, the ability, honesty, every qualification for a successful business career; but the necessity is not there. Then, should sickness or death remove the support on which she has leaned, developing the necessity, it takes so long to develop the courage and the determination that nothing shall stand in the way of success.

**EXTRA! EXTRA! PROFESSOR
McGARGLE RETURNS FROM
EUROPE WITH NEW
A C TUBE**

Says New Invention Will Revolutionize Radio Industry!

NEW YORK CITY, April 31.—Professor Aloysius McGargle, the internationally notorious Radio Expert, arrived home from Europe on the "Mammoth" of the Shooting Star Line, this morning. To reporters who boarded the ship at Quarantine, Prof. McGargle said:

"Boys, I have here in that little black bag the dynamite which is going to rock the Radio Industry of the United States. I mean the 'McGargle AC Tube,' which is the result of my past year's work in collaboration with the best minds of the Faculty of Science at the University of Prague, Bohemia.

"The McGargle Tube will eliminate A, B and C batteries, coils, condensers, transformers, loud speakers, plugs and jacks, panels, howls, static, profanity, aeriels, grounds and cabinets. This new tube can be used to light the room, giving a beautiful mellow glow; it will run the vacuum cleaner for tired housewives; operate the washing machine, mangle, electric toaster, heating pad or what have you?—and best of all, when blown out makes a perfect system of electric refrigeration for the household."

Asked if the new tube would be expensive, Prof. McGargle replied: "The cost will be nominal. The Woolworth Stores cabled me for rights of distribution, and I expect to sign a contract with them as soon as I have breakfast at Childs."

Cruise in the Wake of the Pirates

LET your thoughts take you back to the land of dreams where Romance rides swiftly on the wings of adventure. Drink deeply in the enjoyment of your favorite Radio program as your thoughts cruise the Spanish Main.

The Enchanter Radio Reproducer will help you to this solace and comfort. The design alone is sufficient incentive, but the perfect tone—reproduced in its full tonal quality and color—will give you rich, mellow reproduction without the usual interruptions and harshness.

The Enchanter combines an art metal design—Spanish motif—of exceptional beauty and decoration, with perfect radio reproduction. Gives you all that a good speaker can, plus that wonderful invitation to cruise with your thoughts.

FIVE AND TEN

DX Club:

I have been getting much pleasure from a new circuit combination and believe a brief description of it will interest the DX fans. It is a 10-tuber, using the Infradyne amplifier for DX work, and by means of a switch, is changed to a selective 5-tuber. On the 10-tube circuit such stations as CNRV, KFWM, KOA, KOIL, KOIN, KOMO, WCCO and WSAI, have been received at a location in the middle of downtown Los Angeles, with locals on. The RF end uses regeneration, and but one tuning condenser, and this with the infradyne condenser makes but two controls for the 10-tube circuit. I have assembled the whole set into a 7x24 layout, 8 inches deep.

E. R. RAEHRS,
1715 W. 10th St.,
Los Angeles, Calif.

NEW NORTHERN MEMBER

The DX Club:

I've read the majority of letters from DX hounds printed in Radio Doings. The most of them are quite thrilling, because they are out in the "country," away from local intervention. I live in San Francisco, in the Sunset District, not so very far from KFWL. I have a Murdock 5-tube Neutrodyne, which I purchased Dec. 31st, for a ridiculously low price. To date I have received 66 stations clear and loud on my speaker, including KYW, WCCO, CZE, WHO, and several Canadian stations, ranging from British Columbia to Alberta. Never heard of anyone getting KFKB, Milford, Kas. I have tuned this station in three nights in succession. Would like to hear from anyone who has a Murdock Neutrodyne, and what they are getting.

ADRIAN HORTON,
1833 Tenth Ave.,
San Francisco.

A 'FRISCO FADA

DX Club:

I have been a constant reader of your magazine, and wish to be admitted to your DX Club. I have a Fada 6-type R-60 receiver, and for an aerial, a fifty-foot rubber-covered wire, including lead-in. The stations received are as follows:

KFI, KHJ, KNX, KSMR, KFSD, KPSN, KFWO, KOA, WBBM, WJAZ, WJJD, WHB, WSAI, KGW, KOIN, KJR, KGA, CNRV, CFCT, KFBK, KHQ, KOMO, KFON, KNRC, KGEF, KMTR, KOWW, KTBI, KWSC, KFUR, KEX, KOIL and KFQU.

I hold EKKO verification stamps from a majority of above stations, including the two Chicago stations. I enjoy keeping my Ekko Verification Stamp album, as it is the only way to prove your reception of programs from any broadcasting station.

I have had my set only a little over three (3) months, and I think I have done as good as the average owner of receiving sets in receiving DX. Don't you think so?

JOHN L. WHITMEYER,
50 Crown Terrace,
Ashbury Park,
San Francisco, Calif.

ANOTHER "20" BOOSTER

DX Club:

I am another one of those "20" fans that you hear so much about these days, and like most other Radiola "20" owners, I am very well satisfied with my set.

My record isn't among the best, by no means, in fact, it is very small compared to most DX records. Anyway, here goes: KDKA, WLIB, KMOX, KOIL, KFJF, KFKX, CNRV, KSL, KOA, KFXF AMB, KJR, KOMO, KOAC, KOWW, KOIN, KGW, KEX, WBAP and all California stations over 50 watts.

Very truly yours,
MAURICE H. RAPP,
Los Angeles, Calif.

TWO PLANS CONSIDERED BY COMMISSION

The Federal Radio Commission, in their efforts to find a solution to the tangle, are considering two plans. The first, which was submitted by the American Engineering Council, provides for 75 super-power stations on 64 channels, and a very limited local service to cities on 25 channels.

The second plan, submitted by Edgar H. Felix of New York, is believed by its author to be a practical solution suited to immediate application. Mr. Felix's plan provides for four power classes, 50, 500, 5,000 and 50,000 watt stations, allowing for the simultaneous operation of a total of 437 stations, of which 330 are of the local classification and 97 of 500-watt or more.

New Silver-Marshall Power Pack

The use of the 310 power amplifier tube where undistorted quality of reproduction and great volume are desired has given rise to many problems in the design not only of the amplifier itself but also of the power supply unit.

In the Silver-Marshall power pack and power amplifier the audio frequency transformer and the output coupling

transformer are designed to compensate for the poor low note reproduction found in every popular loud speaker.

The power supply device is capable of supplying 400 volts plate potential to the 310 tube and at the same time 25 to 35 volts C bias, and A power for the tube as well. The filter system is so designed that the voltage regulation characteristics tend to maintain the voltage despite the great variation in plate current when a strong low-frequency signal is being amplified. Where this condition does not exist, fans have found that they could obtain no better quality from the 310 tube than from the 371 with but 180 volts B potential. The secret of perfect quality with the 310 depends upon the design of the power supply, and Silver-Marshall have found that through the use of two 316 B rectifier tubes in a full-wave rectifier circuit the voltage regulation is highly satisfactory.

Complete line of Silver-Marshall products is carried by the Radio Supply Co., 920 South Broadway, Los Angeles.

For Your Protection ♦♦ We Changed Its Name

It was inevitable that as soon as the Preston Radio Ground became popular... as soon as it had thoroughly demonstrated its efficiency... that any number of imitations would be put on the market under a wide variety of names... each shouting to the heavens that it would work miracles with any radio set. For this reason we have changed the name of the Preston Ground to the "C. H. Preston's Permanent Radio Ground." This name was selected for two reasons. First of all, we wanted to have a trademark that would contain the signature of C. H. Preston, the imitation of which could be prosecuted under the laws governing forgery. Secondly, we added the word "PERMANENT," because the Preston Ground IS a permanent ground. This claim can hardly be made for competitive products... it took Preston two years to develop a chemical formula that guarantees permanency for the Preston Permanent Radio Ground.

The Orange Label

Every package containing the genuine Preston Permanent Radio Ground will have attached to it an orange colored label bearing the signature of the inventor. This label, copyrighted under the laws governing copyrights, cannot be imitated or copied. The Preston Permanent Radio Ground is sold under a GUARANTEE of satisfactory performance or YOUR MONEY BACK without argument.

RADIO DEALERS WANTED

Hundreds of radio dealers are now selling, at a good profit, the Preston Permanent Radio Ground. Satisfactory selling arrangements can be made for you to handle the GENUINE Preston invention. You owe it to your customers to sell them, in good faith, a product that has a guarantee behind it. Write for discount proposition.

UNGAR & WATSON, Inc.
Manufacturers
1366 South Figueroa St
LOS ANGELES

Distributors for Northern California, Wash. and Ore., THE SEROY CO., 122 Broadway, Oakland, California

Look for Preston's Signature

On the label attached to the carton containing each Preston Permanent Radio Ground you will find the signature of the inventor certifying to its genuineness. This signature also appears on the label attached to the Preston Permanent Radio Ground itself. Protect your investment by insisting on the genuine Preston product.

FREE LITERATURE

Your name, on a postcard, will bring to you our folder which describes the Preston Permanent Radio Ground and tells what it will do towards improving radio reception for you. Do not be afraid to write for full particulars regarding this product and the money-back guarantee under which it is sold.

ATWATER KENT RADIO

Simplicity --- Comfort
Two Highly Prized Features

Simplicity has always been a feature of Atwater Kent Receivers, but the One Dial control is beyond anything ever before dreamed of in not only simplicity but accuracy, dependability and speed.

And now, the last word in comfort is found in the Pooley Armchair model cabinet, equipped with the famous Atwater Kent One Dial Receiver.

Finished on all four sides—it may be placed anywhere in the room. Contains all accessories, including batteries or eliminator and built-in speaker of exceptional purity and volume.

Willy's Over-Air Practical Radio Laboratory

Is Located Four Blocks from KFSG, and We Cut This Station by 2 Degrees!

The best Radio Engineers own the finest sets in the world, because they use in their construction only the patented principles which have been thoroughly tested and proven to be the best. If you desire the same benefits, come and see us.

We calibrate all frequencies and match your coils at any wave-length. We have the only true instrument with amplifier for calibrating I. R. F. T. for ALL FREQUENCIES on Super-Heterodynes.

Expert Repair Work of All Kinds Open Evenings Until 10 o'Clock

"Super-Ball" Antenna Gets-It-All

The Super-Ball Antenna is a remarkable invention that marks a new era in radio.

Much of the success of any radio set depends on the efficiency of the antenna.

The Super-Ball Antenna, tested under all conditions, on all radio circuits, is always efficient.

It receives all wave lengths, it serves with any make of receiver, it gets unequalled results, greater selectivity.

It accepts radio frequency signals, it rejects a large part of the interference which long wire aerials collect, it is much more responsive to distance than wire aerials.

The Super-Ball Antenna in a very short period of time has made an unprecedented climb to leadership.

Already internationally known on the basis of merit alone, it has thousands of satisfied users.

It has a non-directional, smooth surface; it has no welded, brazed or soldered joints to impair its efficiency.

You'll never know what your radio set is capable of doing until you connect it with a Super-Ball Antenna.

20 Times as Selective!

THE WONDERFUL RADIOLA 20

Has been specially devised to meet crowded broadcasting conditions. Laboratory tests have actually proven that the "20" is 20 times as selective as the average antenna set. Add to this its rich tone-quality, simplicity of operation, and the new reduced price—\$78.00, less accessories—and what better value is there in Radio today? Ask one of these

Class.

Eveready Layerbilt "B" Battery No. 486, the Heavy-Duty battery that should be specified for all loud-speaker sets. Price \$5.00.

The Layerbilt patented construction revealed.

Radio is better with *Battery* Power

RADIO receivers designed for quality reproduction operate best on well-made dry cell "B" batteries. What your ear tells you about the performance of battery-run sets is confirmed by laboratory tests that reveal that batteries alone provide steady, noiseless "B" current, taking nothing from and adding nothing to radio reception. Batteries, and batteries alone, provide pure DC (Direct Current). Only such current can give you the best results of which your set is capable.

Battery Power is dependable, convenient, and reliable, under your sole control, ever ready to serve you when you turn on your set. As your "B" batteries approach the end of their usefulness, a slight drop in volume warns you in ample time. You need never miss a single concert if your set is battery-equipped.

Not only in results, convenience and reliability are "B" batteries unequaled, but they are also unapproachable in

economy, provided, of course, the correct size batteries are used. That means the Heavy-Duty type for all receivers operating loud speakers, as most do nowadays. Smaller batteries are not as economical, though they give you the quality advantages of Battery Power.

For best economy, choose the Eveready Layerbilt "B" Battery No. 486. In every test and trial this has proved conclusively to be the longest-lasting "B" battery ever built. Its unique, patented internal construction is responsible for its astonishingly long life. It is, we believe, the most economical, as well as the most satisfactory, convenient and reliable source of "B" current available. Just remember this: Radio is better with *Battery* Power, and the extraordinary Eveready Layerbilt "B" Battery No. 486 offers you that power most economically.

National Training Makes More Sales for Radio Salesmen!!

This is the age of specialization—even in Radio, the latest scientific money-maker. You may be a good salesman, but—you must also know "what makes Radio go!" You can get that quickly and thoroughly at NATIONAL in your spare time—learn while you sell in your regular job.

See the \$100,000 Equipment in Action

Visit National—see for yourself the wonderful new electrical equipment which will be yours to use while you study radio. When you complete the intensive course you will be able to back your selling knowledge with technical skill that demands—and gets—more money.

NATIONAL Electrical School

4006 South Figueroa Street
Los Angeles, Calif.

MAIL THE COUPON TODAY

National Electrical School,
4006 S. Figueroa St., Dept. 617,
Los Angeles.

Please send me at once the full details of your course which helps radio salesmen. I am interested in making more money.

5:30 to 6:30 p. m.—Mac and his Gang. Stage and Screen.
6:30 to 7:00 p. m.—Cecilian Trio.

WEEK COMMENCING SUNDAY, APRIL 24, 1927

SUNDAY, APRIL 24

- 5:00 to 6:00 p. m.—Twilight Recital. Vocal and instrumental selections.
6:00 p. m.—Stage, Screen and Police Reports.
6:30 to 8:30 p. m.—Hotel Mark Hopkins Concert Orchestra.

MONDAY, APRIL 25

- 7:00 to 7:30 p. m.—Western Motors Hawaiians.
8:00 to 10:00 p. m.—Blue Monday Jamboree.
10:00 to 12:00 p. m.—Eddie Harkness Mark Hopkins Hotel Dance Orchestra.

TUESDAY, APRIL 26

- 7:00 to 7:20 p. m.—Russell-Colvin Trio; Mary Pasmore, violinist; Frank Moss, pianist; Herman Reinberg, 'cellist.
8:05 to 8:40 p. m.—KFRC Radio Movie Club, with Bill Hawley and "Puss" Donahoo, comedy duo.
8:40 to 8:50 p. m.—Prof. Herman Schnitzel.
8:45 to 12:00 p. m.—Eddie Harkness' Mark Hopkins Dance Orchestra.

WEDNESDAY, APRIL 27

- 7:00 to 8:00 a. m.—Breakfast concert.
7:00 to 7:30 p. m.—"Puss" Donahoo and his Orchestra.

- 8:00 to 10:00 p. m.—Sherman, Clay & Co. presents the grand opera "Carmen" by Bizet, direction Frank Moss.
10:00 to 12:00 p. m.—Eddie Harkness' Mark Hopkins Dance Orchestra.

THURSDAY, APRIL 28

- 7:00 to 7:03 p. m.—Western Motors Trio.
8:00 to 9:00 p. m.—Mona Motor Oil program.
9:00 to 10:00 p. m.—Organ Recital by Theodore Strong at Aeolian Duo-Art Pipe-Organ.
10:00 to 12:00 p. m.—Eddie Harkness' Mark Hopkins Dance Orchestra.

FRIDAY, APRIL 29

- 7:00 to 7:30 p. m.—KFRC Encyclopedia Period.
8:00 to 10:00 p. m.—Gillfillan Neutrodyne Evening of Music.
9:00 to 10:00 p. m.—Program, featuring selections from grand opera "Faust."
10:00 to 12:00 p. m.—Eddie Harkness' Mark Hopkins Hotel Dance Orchestra.

SATURDAY, APRIL 30

- 7:00 to 7:30 p. m.—Club Carlton Orchestra.
8:00 p. m. to 1:00 a. m.—Eddie Harkness' Mark Hopkins Dance Orchestra.

Program Published as Submitted by the Station.

WEEK COMMENCING SUNDAY, APRIL 24, 1927

SUNDAY, APRIL 24

10:00 a. m.—Services of Central Presbyterian church, Denver. Sermon—"The Kinship of Christ," Rev. Martin E. Anderson, D.D. pastor.

4:30 p. m.—Organ recital from Central Presbyterian church, Denver; Clarence Reynolds, organist.

6:30 p. m.—Dinner concert, Brown Palace orchestra, Howard Tillotson, director.

6:45 p. m.—Service of Central Presbyterian church, Denver. Sermon—"The Primacy of the Cross," Rev. Martin E. Anderson, D.D., pastor.

MONDAY, APRIL 25

6:30 p. m.—Children's hour.

7:00 p. m.—Instrumental program by Scheuerman's Colorado orchestra.

7:15 p. m.—D. & R. Theaters program, featuring the Egyptian Theater orchestra.

TUESDAY, APRIL 26

2:15 p. m.—Talk—"The Gentle Art," given by Anne McKeen Schuler.

2:15 p. m.—Talk—"The Gentle Art," given by Anne McKeen Schuler.

2:30 p. m.—Housewives' matinee, arranged by Helen Olin Roberts.

3:30 p. m.—Question box.

3:45 p. m.—Fashion review, given by the Gano-Downs company, Denver.

6:30 p. m.—Farm question box George C. Wheeler, editor, Western Farm Life.

8:00 p. m.—Radio instruction in auction bridge, conducted by studio players.

WEDNESDAY, APRIL 27

6:30 p. m.—Wynken, Blynken and Nod time.

7:00 p. m.—Instrumental program by Scheuerman's Colorado orchestra.

7:15 p. m.—Public Service company program.

THURSDAY, APRIL 28

2:15 p. m.—Talk—"The Gentle Art," given by Anne McKeen Schuler.

2:30 p. m.—Housewives' matinee, "The Little Poor Man," presented by Jefferson Dramatic Society of St. Elizabeth's church.

3:30 p. m.—Fashion review, given by the Gano-Downs company, Denver.

4:00 p. m.—Stocks, markets, livestock, produce and news bulletins.
Silent Night.

FRIDAY, APRIL 29

10:00 a. m.—Lenten service in the studio. Sermon—"The Religion of the Cross," Rev. Robert Hopkin, pastor of First Congregational church, Denver.

11:15 p. m.—Instrumental concert by Denver Union Pacific Shop Employees' band.

12:00 Noon—Organ recital Aladdin theater.

6:00 p. m.—"Aggie Kickoffs," Colorado Agricultural college.

6:30 p. m.—Preview of International Sunday school lesson.

7:00 p. m.—Good Friday service, a cantata, "The Crucifixion," by Sir John Stainer, to be presented at Central Presbyterian church, Denver.

SATURDAY, APRIL 30

9:15 p. m.—Dance program, Scheuerman's Colorado orchestra, from the Cathedral ballroom, Albany hotel, Denver.

inductance of the windings provides a tuned circuit for some particular group of frequencies which will be amplified out of all proportion to the rest of the scale.

Transformer manufacturers have fought this proposition until the amplification curve has gradually flattened out, but still is far from a straight line.

Then we have resistance coupling. Here is an improvement in that iron cores with their lagging molecules, unwanted resonant circuits of inductance and capacity, etc., are eliminated, BUT, in order to keep the plate voltage of the preceding tube off the grid of the next tube we must use a grid condenser, and then to maintain our grid polarity we must use a grid leak.

The coupling resistance, the grid condenser and grid leak must be very carefully balanced for each stage, the values changing as the amplification progresses. The difficulty is to keep the grid negative when each grid has a greater alternating voltage applied to it than the preceding tube. Hence the variation in the leaks. Furthermore, since the circuits contain capacity and no inductance, the current and voltage will be out of phase with each other, and this phase angle difference must be constant all through the amplifier or distortion results. However, with a properly designed resistance coupled amplifier a more nearly straight-line characteristic may be obtained than with transformers.

Another type is the impedance coupled. Here we still have the grid condenser and leak as well as the impedance unit, with its inductance, distributed capacity and iron core. Through the use of very high grade and costly inductances, this type is on a par with the best of the first two types mentioned. A recent development is the "dou-

ble impedance" type. Here the grid leak is replaced by an inductance, which eliminates the uncertainty of the permanency of the resistance value of the leak, permits the use of the normal and definite C voltage, prevents blocking, etc. However, for fairly uniform amplification the inductances must be very large, as must also the coupling condenser. There will probably be considerable development along the lines of the double impedance type.

One of the most interesting and outstanding developments in audio amplification is the new Orthoformer. In this system we have only the pure amplification of the vacuum tube. In the coupling method there are no capacities or inductances, just pure non-inductive resistance.

The two amplifier tubes operate exactly under conditions of B and C potential which insure straight-line distortionless amplification and there is nothing in the accompanying coupling circuits which can detract from or add to the amplification of any frequency with relation to any other frequency. The faults of the other types of amplifiers are all due to the presence of inductance, capacity, iron cores, and circuits whose characteristics are not constant under the varying frequencies of the audio range and which often prevent even the tubes from operating as efficient amplifiers.

The first Orthoformer tube does not function as an amplifier, but simply as a coupling relay or "trigger," to operate the two amplifying tubes which follow. The writer is not at liberty to disclose the patented circuit employed, but can state that in the Orthoformer the ideal conditions desired for true amplification are attained. Not only is the characteristic a straight-line for the whole

(Turn to Page 76)

The Musician's Point of View

(Continued from Page 18)

stance of joy. This comes to him from two main sources,—hearing the music that comes from his instrument, and seeing the appreciation of his audience and the happiness he has brought to his listeners. These were the first two things that radio took from him! He has no visible audience, and he is put into a padded cell that chokes off the sound that returns to him from reverberating walls, that alone tells him of the beauty, the merit of his work.

What deeper and heavier voice can thrill an audience as does the tenor and the soprano? Yet, so afraid is the radio apparatus of a high or life-vibrating dramatic note, that the engineers in charge of stations throttle these singers until they are but corpses of dead joy before they ever begin their song! If the singer succeeds in preserving a tiny bit of life, and accidentally lets it manifest itself in a high note, thrilling with the sheer joy of life, the operator at the set twiddles a dial—he is afraid of "blasting"—and the note comes out as a faint thing!

This same worthy and conscientious operator—faithfully guarding his tubes—will take a tiny, screeching, shrill voice and, by certain twiddling of his dials, send it forth a wondrous mezzo-soprano, or a rich, operatic tenor! He takes the silken threads of a high violin note and twiddles it into a brazen copper band of sound! He reduces—by more twiddling—the dramatic crescendos of a symphony orchestra to a thrillless flow of cold molasses! He raises the pianissimo passages to a monotonous medium—and these are some of the reasons why honest-to-God musicians seldom listen in! Why so many of the really great singers demand such exorbitant prices to sing for you! Why

members of the Musicians' Union do likewise!

But think of the good they can do over radio! the people whom they can reach that can not be reached in any other way! I can almost hear some of you say—True! And, for pure dyed-in-the-wool charity, backed up by Uncle Sam's gold coin, go to the musicians, the artists, the stage folk! This is so well known that those who damn them all, as a class, one day, search them out the next, knowing that they are the first to turn their pockets inside out for some poor devil who is up against it!

A pianist thrills himself and his listeners with the marvelous tonal qualities of his pedal-sustained notes. The studio manager eliminates the sustaining pedal with his first word of direction to the performer. Piano manufacturers spend more time, money and thought over the perfection of this pedal than over any other part of the instrument, because it is the vibrating sustained note that thrills, inspires the player as well as the listener. Some studio managers have even gone to the length of tying down or removing this pedal altogether, and the radio listener hears a tinety-blinkety noise like no piano on earth!

Engineers in the huge laboratories are working like madmen, literally driving themselves into premature graves via the sanitarium route, in order to perfect apparatus. They will never rest until they can deliver the music into your homes exactly as it sounds to you when you hear it in a theatre or great auditorium. Meanwhile, stations are sending out music through, as yet, unperfected apparatus, handled, in most cases, by earnest young mechanics who may know how to run the works, but who do not know a note of music, and

The Musician's Point of View

(Continued from Page 75)

whose knowledge of beautiful tone production is limited by the fear of what a high note will do to his tubes, and his firm belief that high violin notes and sopranos and dramatic orchestral music are hell!

In another article I hope to tell you something of how two temperamental people—a soprano and a poet-writer-fisherman-soldier, — neither of whom have ever experienced that much-talked-about thing, a suppressed emotion,—have fought this thing out at KFWO, and still live to tell the tale!

Quality

(Continued from Page 74)

range, but due to the fact that there is no phase-angle varying through successive stages, the result is a clean cut reproduction of every note, and not a blurring together of a mass of what were once individual frequencies. In other words, it is possible to pick out each individual instrument and note in an orchestra; individual voices in a chorus. The elimination of all inductance, capacity and iron, have left exactly what is desired,—a true, clean-cut and uniform reproduction of the whole audio range.

Woman's Page

(Continued from Page 26)

of making Angel Food Cake; and now with eggs 30c a dozen, this is really the most economical of cakes. I am assured that one will never have a failure with this recipe, and that the cake will never be dry. ■

Boil together $1\frac{1}{2}$ cups of sugar and $\frac{1}{2}$ cup of water until when dropped in cold water it forms a soft ball. Have

beaten the whites of eggs (about nine, but the amount of whites unbeaten should be $1\frac{1}{4}$ cups). While beating the whites add 1 teaspoonful of cream tartar and $\frac{1}{4}$ teaspoonful of salt. Pour the boiling syrup into the stiff whites of eggs, beating it in slowly as you pour; then fold in a cup of Swansdown flour, which has been sifted four times. Bake in a regular angel-food cake tin, in a slow oven, about 45 minutes.

\$1 Get Distance Amazing Discovery For Any Radio

Why confine your radio programs to a few local stations when the expensive concerts, dance music and lectures of hundreds of big cities are ready for you? With every order for our treatise, "The Distance Getter," we include FREE our wonderful new Distance Transformer. Tune your set according to our special instructions and presto — note the distant stations roll in!

Satisfaction Guaranteed

Your money instantly refunded if you are not satisfied. The attachment furnished FREE with the "Distance Getter" alone is worth the price.

"Results beyond all expectations. Cuts through local stations like a knife," — writes Galloway of Chicago, Ill.

"Send three more for my friends. I get Denver and Calif. easily," says Homes, Palos, Ill. "I also get stations in Canada, Chicago, Miami, all on loud speaker with sufficient volume to be heard all over the house," says Pecker of Swampscott, Mass.

"Thus far I've pulled in many stations I formerly only read about" Praidel of Ohio.

Hazleton Laboratories.

Timely Trade Topics

The next regular meeting of the Radio Manufacturers Agents Association will be held at the Elite, 633 S. Flower Street on Friday, April 22, at noon. The annual election of officers to serve for one year will be held at this time.

The Baker-Smith Company, who represent the Enchanter, the Herald, the Sylfan and the Elec-Tru-Tone Companies have removed from their old office at 715 New Call Bldg., San Francisco, to the New Chronicle Building.

The Woodlark Radio Products Company, 7730 Washington Blvd., is again in production on the Woodlark and Big Chief Speakers. Mr. R. W. Powers recently sold his interest in this company to Mr. David O. Stohl and C. W. Taylor.

H. G. Pearce of Los Angeles, long connected with Amateur Radio, is taking over the management of Long's Radio Co. at 2812 South Main Street. A more extensive line of supplies will be handled for the home set-builder and amateur experimenter.

The Holloway Hardware Company, located at Vernon and Manchester, Los Angeles, have installed a complete radio department, handling nothing but the best in radio, including the Holmes Receivers and Loud Speaker, CeCo Tubes, Goslico Aerial and Bus Wire, Philco products, and many other popular lines.

The Pacific Wholesale, Inc., of 1320 South San Pedro Street, is distributing the Eclipse set in Southern California and reports wonderful success. Mr. Carter, President of the Eclipse Mfg. Company, has lately moved the plant to 1911 Fourth Avenue, where they are equipped to more than double the production possible in the old plant.

The Neutrowound Manufacturing Co., of Homewood, Ill., manufacturers of the famous Neutrowound receiver, and represented in Southern California by J. W. Fitzgerald, are now displaying their ALLECTRIC set in their headquarters, room 900 Allied Crafts Bldg., corner Pico and Maple, Los Angeles. The manufacturers of this model have left nothing undone towards embodying the latest features in their attractive batterless set. It operates direct from electric light socket. Mr. Fitzgerald invites the trade to visit the Western Auto Electric Co., 16th and Hope Sts., Southern California Distributors.

The A. J. Tobey Company, 15th and Hope streets, Los Angeles, distributors for the PHILCO Socket power unit, Holmes receiving sets, Ceco tubes and various other popular and well-known radio merchandise, to assist his many dealers in both Los Angeles and Hollywood, is employing an attractively decorated automobile in charge of that popular entertainer, Uncle Remus, using the public address system, in a novel advertising campaign, Uncle Remus, with Little Boy Blue, providing entertainment in their inimitable style, at the various dealers during the evenings. This is only one manner in which the A. J. Tobey Company lends full co-operation to his many dealers.

Lowe's Cabinet Shop, located at 3635 Avalon Blvd., Los Angeles, has been purchased by W. A. Johnson, and is now known as JOHNSON'S CABINET WORKS. Mr. Johnson, who needs no introduction to the cabinet trade, has installed new machinery of the latest type and has obtained the services of mechanics of the highest calibre. Mr. Johnson personally supervises all work going through his shop and guarantees absolute satisfaction.

Broadcasters' Digest

Harold Isbell, Town Crier of the Night at KNX, the Evening Express, considered one of the leading announcers on the coast, caused considerable havoc among listeners recently when he took a three-day trip without having any kind of an announcement made. Hundreds of people phoned in asking what had happened. Isbell keeps himself in the background all of the time and makes only the necessary announcements during programs, which makes him even more popular. It was necessary for the substitute announcer to explain that Isbell would be back in a few days before the inquiries could be halted.

KPO's HAPPY HOUR for the shut-in folks is now being broadcast every morning except Sunday from KPO, during the 8 to 9 o'clock hour. Sponsored by the Sperry Flour Company, the new feature is introducing many novel things in the way of entertainment and cheer for the folks who must live lonely lives because of some physical ailment or misfortune. Interesting readings, musical offerings by some of KPO's favorite artists, and instructive articles will be broadcast during the Happy Hour from time to time, it is announced. The feature is being directed by Hugh Barrett Dobbs, Physical Instructor, and one of the station's cleverest entertainers.

One hundred baby chicks are being given to some poultry raiser in the Northwest each week through a Minneapolis station.

Station KFVD, at Venice, California, claims the distinction of having the only woman announcer, studio manager and accompanist in the West—Mrs. Mary Elizabeth Carter. Mrs. Carter's long experience on the stage in New York City and other metropolitan centers was excellent training for her present position, and she is noted for the clearness and charm of her enunciation. Mrs. Carter was the originator of "Mary Elizabeth's Garden," a morning feature which has proven very popular with women and children; but her work registers equally well with men listeners, whose early skepticism has been overcome. Station KFVD is located above the Venice Ballroom on the famous pleasure pier, and Mr. McWhinnie of the McWhinnie Electric Company, owners of the Station, wishes the public to know that visitors are always welcome in the studio at any time between 9 a.m. and midnight. Mrs. Carter is always there, whether "at the mike" or not, and is anxious to get acquainted with, and receive suggestions from the Radio Public.

SH-H-H!

Query—I hear such dizzy noises on my radio, what can the answer be?

Answer—Probably your tubes are "lit."—Radio News.

Nearly all the Navy spark sets ashore and afloat have now been replaced by tube sets, causing listeners much less interference.

RAY-O-VAC

The French Battery Company of Madison, Wisconsin, is one of the largest manufacturers in the dry battery and flashlight field. The Company's products, advertised and sold under the trade name of Ray-O-Vac, are universally known for their high quality. This reputation the Company goes to great lengths to maintain. The secret of long service given by Ray-O-Vac products is the care taken in selecting raw materials, as well as in the process of manufacture. The purchaser of Ray-O-Vacs is certain to get the best that can be obtained.

The new radio batteries are the very latest effort to make Ray-O-Vac products the most serviceable of their kind to radio fans. The improved reception, with either of these batteries in the circuits, is very noticeable, due to their low internal resistance. Owing to a new type of construction they are light in weight, internal "shorting" is eliminated, and unusual dependability secured. These batteries are, indeed, "Radio's Best Battery."
